Moodle Plugin Data Audit

The University of Nottingham Moodle system makes use of modular 'plugins' to provide functionality to users. Each of these plugins may store personal data in specific tables inside the main Moodle system.

On the following pages is a list of all of the available functionality in the Moodle system and a statement relating to what (if any) personal data that functionality stores (correct as of December 2020).

Note that the choice of functionality in a taught Moodle module is made by the module teaching team. An average Moodle module will make repeated use of a very small subset of the entire functionality available. Note that user data is only stored when a specific module makes use of that functionality.

University of Nottingham Moodle

Plugin privacy compliance registry

Icons used on this page and what they mean.

⚠️

This plugin does not implement the Moodle privacy API. If this plugin stores any personal data it will not be able to be exported or deleted through Moodle's privacy system.

Additional

An additional plugin installed on this site.

Deprecated

This plugin is using an old version of one of the privacy interfaces and should be updated.

Userlist provider missing

This plugin has the base provider but should also implement the userlist provider for full support of privacy functionality.

Collapse all

▾ Antivirus plugin

▾ ClamAV antivirus

The ClamAV antivirus plugin does not store any personal data.

▾ Availability restriction

▾ Restriction by activity completion

The Restriction by activity completion plugin does not store any personal data.

▾ Restriction by date

The Restriction by date plugin does not store any personal data.

▾ Restriction by grades

The Restriction by grades plugin does not store any personal data.

▾ Restriction by group

The Restriction by group plugin does not store any personal data.

▾ Restriction by grouping

The Restriction by grouping plugin does not store any personal data.

▾ Restriction by profile

The Restriction by profile plugin does not store any personal data.

The Restriction by profile plugin does not store any personal data.

▾ **Question type**

▾ **Calculated**

The Calculated question type plugin does not store any personal data.

▾ **Calculated multichoice**

The Calculated multichoice question type plugin does not store any personal data.

▾ **Calculated simple**

The Calculated simple question type plugin does not store any personal data.

▾ **Drag and drop onto image**

The Drag and drop onto image question type plugin does not store any personal data.

▾ **Drag and drop markers**

The Drag and drop markers question type plugin does not store any personal data.

▾ **Drag and drop into text**

The Drag and drop into text question type plugin does not store any personal data.

▾ **Description**

The Description question type plugin does not store any personal data.

▾ **Essay**

The Essay question type plugin does not store any personal data.

▾ **Select missing words**

The Select missing words plugin does not store any personal data.

▾ **Matching**

The Matching question type plugin does not store any personal data.

▾ **Missing type**

The Select missing words question type plugin does not store any personal data.

▾ **Embedded answers (Cloze)**

The Embedded answers (Cloze) question type plugin does not store any personal data.

▾ **Multiple choice**

The Multiple choice question type plugin does not store any personal data.

The Multiple choice question type plugin does not store any personal data.

▾ Numerical

The Numerical question type plugin does not store any personal data.

▾ Pattern match (Additional)

qtype_pmatch_testquestio n_pagesize
user_preference

Number of pattern match question attempts to show per page.

▾ Random

The Random question type plugin does not store any personal data.

▾ Random short-answer matching

The Random short-answer matching question type plugin does not store any personal data.

▾ Short answer

The Short answer question type plugin does not store any personal data.

▾ True/False

The True/False question type plugin does not store any personal data.

▾ Variable numeric (Additional)

The Variable numeric plugin does not store any personal data.

▾ Variable numeric set (Additional)

The Variable numeric set plugin does not store any personal data.

▾ Activity module

▾ absenceform (Additional)

absenceform_reasons
database_table

Stores the reasons users have given for an absence

userid	The user who was absent
session_name	The name of the session the user was absent from
reason	The reason given by the user for their absence
notes	Additional notes given by the user to explain their absence
submit_time	The time at which the user submitted their reason

▾ Allocation forms (eForms) (Additional)

allocationform_choices
database_table

Stores the choices a user has made on an allocation form

userid	The user making the choices
choice1	The user's first preference

choice2	The user's second preference
choice3	The user's third preference
choice4	The user's fourth preference
choice5	The user's fifth preference
choice6	The user's sixth preference
choice7	The user's seventh preference
choice8	The user's eighth preference
choice9	The user's ninth preference
choice10	The user's tenth preference
notwant	An option the user does not wish to be allocated to

allocationform_allocations database_table	Stores the allocations made for the user
userid	The user being allocated
allocation	The option the user was allocated to

allocationform_disallow database_table	Stores the options a user has been stopped from choosing
userid	The user being restricted
disallow_allocation	The option the user is restricted from selecting

▾ Course Resource List (Additional)

lti_client external_location	In order to integrate with a remote Talis Aspire LTI Tool Provider, user data needs to be exchanged with Talis Aspire. No user data is stored in Moodle by this plugin
userid	The userid is sent from Moodle to allow you to access your data in Talis Aspire.
role	The role is sent from Moodle to allow you to have the right experience in Talis Aspire.
courseid	The courseid is sent from Moodle to allow you to find the right list in Talis Aspire.
courseidnumber	The courseidnumber is sent from Moodle to allow you to find the right list in Talis Aspire.
courseshortname	The courseshortname is sent from Moodle to allow you to find the right list in Talis Aspire.
coursefullname	The coursefullname is sent from Moodle to allow you to find the right list in Talis Aspire.

▾ Assignment

assign_grades database_table	Stores user grades for the assignment
userid	ID of the user
timecreated	Time created
timemodified	Last modified
grader	The user ID of the person grading.
grade	The numerical grade for this assignment submission. Can be determined by scales/advancedgradingforms etc but will always be converted back to a floating point number.
attemptnumber	Attempt number

assign_overrides database_table	Stores override information for the assignment
groupid	Group ID that the user is a member of.
userid	ID of the user
allowsubmissionsfromdate	Allow submissions from
duedate	Due date

cutoffdate	Cut-off date

assign_submission
database_table

Stores user submission information

userid	ID of the user
timecreated	Time created
timemodified	Last modified
status	Grading status
groupid	Group ID that the user is a member of.
attemptnumber	Attempt number
latest	Greatly simplifies queries wanting to know information about only the latest attempt.

assign_user_flags
database_table

Stores user meta data such as extension dates

userid	ID of the user
assignment	Assignment ID
locked	Lock submissions
mailed	Has this user been mailed yet?
extensionduedate	Extension due date
workflowstate	Marking workflow state
allocatedmarker	Allocated Marker

assign_user_mapping
database_table

The mapping for blind marking

assignment	Assignment ID
userid	ID of the user

assign_perpage
user_preference

Number of assignments shown per page.

assign_filter
user_preference

Filter options such as 'Submitted', 'Not submitted', 'Requires grading', and 'Granted extension'

assign_markerfilter
user_preference

Filter the assign summary by the assigned marker.

assign_workflowfilter
user_preference

Filter by the different workflow stages.

assign_quickgrading
user_preference

A preference as to whether quick grading is used or not.

assign_downloadasfolders
user_preference

A user preference for whether multiple file submissions should be downloaded into folders

assignsubmission
plugintype_link

Submission data for the assignment.

assignfeedback
plugintype_link

Feedback data for the assignment.

core_message
subsystem_link

Messages are sent to students through the messaging system.

▾ [Assignment 2.2 (Disabled)](#)

assignment_submissions database_table	Assignment submissions associated with an assignment.
userid	The user ID submitting the assignment submission.
timecreated	The creation date/time of the assignment submission.
timemodified	The modification date/time of the assignment submission.
numfiles	The maximum number of files allowed for the assignment submission.
data1	The onlinetext submitted for the assignment submission.
data2	The tracked status for the assignment submission.
grade	The grade value awarded for the assignment submission.
submissioncomment	The submission comment accompanying the assignment submission.
teacher	The teacher user ID grading the assignment submission.
timemarked	The marking date/time of the assignment submission.
mailed	The mailed notification status of the assignment submission.
assignment_filter user_preference	Filter preference of assignment submissions.
assignment_mailinfo user_preference	Mail info preference for assignment submissions.
assignment_perpage user_preference	Number of assignment submissions shown per page preference.
assignment_quickgrade user_preference	Quick grading preference for assignment submissions.

▾ Attendance (Additional)

attendance_log database_table	Log of user attendances recorded.
sessionid	Attendance session ID.
studentid	ID of student having attendance recorded.
statusid	ID of student's attendance status.
statusset	Status set to which status ID belongs.
timetaken	Timestamp of when attendance was taken for the student.
takenby	User ID of the user who took attendance for the student.
remarks	Comments about the user's attendance.
ipaddress	IP address attendance was marked from.
attendance_sessions database_table	Sessions to which attendance will be recorded.
groupid	Group ID associated with session.
sessdate	Timestamp of when session starts.
duration	Session duration in seconds
lasttaken	Timestamp of when session attendance was last taken.
lasttakenby	User ID of the last user to take attendance in this session
timemodified	Timestamp of when session was last modified
attendance_warning_done database_table	Log of warnings sent to users over their attendance record.
notifyid	ID of attendance session warning is associated with.
userid	ID of user to send warning to.

| timesent | Timestamp when warning was sent. |

▾ Book

The book activity module does not store any personal data.

▾ Chat

chat_messages database_table	A record of the messages sent during a chat session
userid	The user ID of the author of the message
message	The message
issystem	Whether the message is a system-generated message
timestamp	The time when the message was sent.

chat_messages_current database_table	Current chat session. This data is temporary and is deleted after the chat session is deleted
userid	The user ID of the author of the message
message	The message
issystem	Whether the message is a system-generated message
timestamp	The time when the message was sent.

chat_users database_table	Keeps track of which users are in which chat rooms
userid	The user ID
version	How user accessed the chat (sockets/basic/ajax/header_js)
ip	User IP
firstping	Time of the first access to chat room
lastping	Time of the last access to chat room
lastmessageping	Time of the last message in this chat room
lang	User language

▾ Choice

choice_answers database_table	Information about the user's chosen answer(s) for a given choice activity
choiceid	The ID of the choice activity
optionid	The ID of the option that the user selected.
userid	The ID of the user answering this choice activity
timemodified	The timestamp indicating when the choice was modified by the user

▾ Database

data_records database_table	Represent records in database acitivity module
userid	User who created the record
groupid	Group
timecreated	Time when record was created
timemodified	Time when record was last modified
approved	Approval status

data_content	Represents one answer to one field in database activity module
database_table	

fieldid	Field definition ID
content	Content
content1	Additional content 1
content2	Additional content 2
content3	Additional content 3
content4	Additional content 4

datafield	Fields for database activity module
plugintype_link	

core_comment	Comments on database records
subsystem_link	

core_files	File attached to the database record
subsystem_link	

core_tag	Tags on database records
subsystem_link	

core_rating	Ratings on database records
subsystem_link	

▾ Feedback

feedback_completed	A record of the submissions to the feedback
database_table	

userid	The ID of the user who completed the feedback activity.
timemodified	The time when the submission was last modified.
anonymous_response	Whether the submission is to be used anonymously.

feedback_completedtmp	A record of the submissions which are still in progress.
database_table	

userid	The ID of the user who completed the feedback activity.
timemodified	The time when the submission was last modified.
anonymous_response	Whether the submission is to be used anonymously.

feedback_value	A record of the answer to a question.
database_table	

value	The chosen answer.

feedback_valuetmp	A record of the answer to a question in a submission in progress.
database_table	

value	The chosen answer.

▾ Folder

The Folder resource plugin does not store any personal data.

▾ Forum

forum_digests	Information about the digest preferences for each forum.

database_table

forum	The forum subscribed to.
userid	The ID of the user with the digest preference.
maildigest	The digest preference.

forum_discussions
database_table

Information about the individual forum discussions that a user has created

name	The name of the discussion, as chosen by the author.
userid	The ID of the user who created the discussion
assessed	TODOD - what does this field store
timemodified	The time that the discussion was last modified.
usermodified	The ID of the user who last modified the discussion in some way.

forum_discussion_subs
database_table

Information about the subscriptions to individual forum discussions

discussionid	The ID of the discussion that was subscribed to.
preference	The start time of the subscription.
userid	The ID of the user with the discussion subscription.

forum_posts
database_table

Information about the digest preferences for each forum.

discussion	The discussion that the post is in.
parent	The parent post that was replied to.
created	The time that the post was created.
modified	The time that the post was last modified.
subject	The subject of the forum post.
message	The message of the forum post.
userid	The ID of the user who authored the forum post.
privatereplyto	The ID of the user this reply was sent to.

forum_read
database_table

Information about which posts have been read by the user.

userid	The ID of the user that this record relates to.
discussionid	The discussion that the post is in.
postid	The post that was read.
firstread	The first time that the post was read.
lastread	The most recent time that the post was read.

forum_subscriptions
database_table

Information about which forums the user has subscribed to.

userid	The ID of the user that this forum subscription relates to.
forum	The forum that was subscribed to.

forum_track_prefs
database_table

Information about which forums the user has chosen to track post reads for.

userid	The ID of the user that this forum tracking preference relates to.
forumid	The forum that has read tracking enabled.

forum_queue
database_table

Temporary log of posts that will be mailed in digest form

userid	User who needs to be notified of the post
discussionid	Forum discussion ID
postid	Forum post ID
timemodified	The modified time of the original post

forum_grades database_table	Grade data for the forum
userid	The user who was graded
forum	The forum that was graded
grade	The grade awarded

[core_tag](#) subsystem_link	The forum makes use of the tag subsystem to support tagging of posts.

[core_rating](#) subsystem_link	The forum makes use of the rating subsystem to support the rating of posts.

maildigest user_preference	The site-wide mail digest preference

autosubscribe user_preference	Whether to subscribe to discussions when replying to posts within them.

trackforums user_preference	Whether to enable read tracking.

markasreadonnotification user_preference	Whether to mark forum posts as read when receiving them as messages.

forum_discussionlistsortor der user_preference	The preferred sorting order of the discussions list

▾ [Glossary](#)

glossary_entries database_table	Information about the user's entries for a given glossary activity
glossaryid	The ID of the glossary activity
userid	The ID of the user that is adding this glossary entry
concept	The concept of the entry the user added
definition	The definition of the entry the user added
attachment	The attachment of the entry the user added
timemodified	The timestamp indicating when the glossary entry was modified by the user

[core_files](#) subsystem_link	Files linked to glossary definitions are stored using the core_files system

[core_comment](#) subsystem_link	Comments made on glossary definitions are stored using core_comment system

[core_tag](#) subsystem_link	Tags added to glossary definitions are stored using core_tag system

[core_rating](#) subsystem_link	Ratings added to glossary entries are stored using core_rating system

IMS content package

IMS content package

The IMS content package plugin does not store any personal data.

MediaSpace Video Assignment (Additional)

core_message	Messages are sent to teachers through the messaging system.
subsystem_link	

kalvidassign_submission	Kaltura video assignment submissions
database_table	
userid	Moodle user id
entry_id	Kaltura entry id
source	The source URL of the media entry
grade	Grade score for the submission
submissioncomment	Submission teacher comment
teacher	Moodle userId of the teacher who marked the submission
mailed	Whether the assignment submission notification has been emailed to the teacher
timemarked	Time the assignment submission was marked
metadata	Stores a base 64 encoded serialized metadata object
timecreated	Time the submission record was created
timemodified	Time the assignment submission was modified

kalvidassign_filter	Filter preference of assignment submissions.
user_preference	

kalvidassign_group_filter	Group filter preference of assignment submissions.
user_preference	

kalvidassign_perpage	Number of assignment submissions shown per page preference.
user_preference	

kalvidassign_quickgrade	Quick grading preference for assignment submissions.
user_preference	

MediaSpace Video Presentation (Additional)

Kaltura video presentation plugin does not store any personal data.

MediaSpace Video Resource (Additional)

Kaltura video resource plugin does not store any personal data.

Label

The Label resource plugin does not store any personal data.

Lesson

lesson_attempts	A record of page attempts
database_table	
userid	The user ID
pageid	The page ID
answerid	The answer ID
retry	The attempt number

correct	Whether the attempt was correct
useranswer	Details about the user's answer
timeseen	The time when the attempt was made

lesson_grades
database_table

A record of the grades for each lesson

userid	The user ID
grade	The grade given
completed	The date when the grade was given

lesson_timer
database_table

A record of a lesson attempt

userid	The user ID
starttime	The date when the attempt started
lessontime	The last moment when we recorded activity
completed	Whether the attempt is complete
timemodifiedoffline	The last moment when we recorded activity from the mobile app

lesson_branch
database_table

A record of the pages viewed

userid	The user ID
pageid	The page ID
retry	The attempt number
flag	Whether the next page was calculated randomely
timeseen	The time when the page was viewed
nextpageid	The next page ID

lesson_overrides
database_table

A record of overrides per lesson

userid	The user ID
available	The time when the lesson may be attempted
deadline	The deadline for completing the lesson.
timelimit	Time limit to complete the lesson, in seconds.
review	Whether trying a question again is allowed
maxattempts	The maximium number of attempts
retake	Whether re-takes are allowed
password	The password to access the lesson

lesson_view
user_preference

The preferred display mode when editing lessons

▼ External tool

lti_provider
external_location

The LTI Consumer provides user information and context to the LTI Tool Provider.

userid	The ID of the user accessing the LTI Consumer
username	The username of the user accessing the LTI Consumer
useridnumber	The ID number of the user accessing the LTI Consumer
firstname	The firstname of the user accessing the LTI Consumer
lastname	The lastname of the user accessing the LTI Consumer
fullname	The fullname of the user accessing the LTI Consumer

email	The email address of the user accessing the LTI Consumer
role	The role in the course for the user accessing the LTI Consumer
courseid	The ID of the course the user is accessing the LTI Consumer from
courseidnumber	The ID number of the course the user is accessing the LTI Consumer from
courseshortname	The shortname of the course the user is accessing the LTI Consumer from
coursefullname	The fullname of the course the user is accessing the LTI Consumer from

lti_submission database_table	LTI submission
userid	The ID of the user who submitted for the LTI activity
datesubmitted	The timestamp indicating when the submission was made
dateupdated	The timestamp indicating when the submission was modified
gradepercent	The grade for the user as a percentage
originalgrade	The original grade for the user

lti_tool_proxies database_table	LTI proxies
name	LTI proxy name
createdby	The user who created the record
timecreated	The time when the record was created
timemodified	The time when the record was modified

lti_types database_table	LTI types
name	LTI type name
createdby	The user who created the record
timecreated	The time when the record was created
timemodified	The time when the record was modified

▾ Page

The Page resource plugin does not store any personal data.

▾ Quiz

quiz_attempts database_table	Details about each attempt on a quiz.
attempt	The attempt number.
currentpage	The current page that the user is on.
preview	Whether this is a preview of the quiz.
state	The current state of the attempt.
timestart	The time that the attempt was started.
timefinish	The time that the attempt was completed.
timemodified	The time that the attempt was updated.
timemodifiedoffline	The time that the attempt was updated via an offline update.
timecheckstate	The time that the state was checked.
sumgrades	The sum of grades in the attempt.

quiz_grades database_table	Details about the overall grade for this quiz.
quiz	The quiz that was graded.

quiz	The quiz that was graded.
userid	The user who was graded.
grade	The overall grade for this quiz.
timemodified	The time that the grade was modified.

quiz_overrides database_table	Details about overrides for this quiz
quiz	The quiz with override information
userid	The user being overridden
timeopen	The new open time for the quiz.
timeclose	The new close time for the quiz.
timelimit	The new time limit for the quiz.

core_question subsystem_link	The quiz activity stores question usage information in the core_question subsystem.

quiz plugintype_link	The quiz activity makes use of quiz reports.

quizaccess plugintype_link	The quiz activity makes use of quiz access rules.

▾ File

The File resource plugin does not store any personal data.

▾ SCORM package

scorm_scoes_track database_table	The tracked data of the SCOes belonging to the activity
userid	The ID of the user who accessed the SCORM activity
attempt	The attempt number
element	The name of the element to be tracked
value	The value of the given element
timemodified	The time when the tracked element was last modified

scorm_aicc_session database_table	The session information of the AICC HACP
userid	The ID of the user who accessed the SCORM activity
scormmode	The mode of the element to be tracked
scormstatus	The status of the element to be tracked
attempt	The attempt number
lessonstatus	The lesson status to be tracked
sessiontime	The session time to be tracked
timecreated	The time when the tracked element was created
timemodified	The time when the tracked element was last modified

aicc external_location	This plugin sends data externally using the AICC HACP.
data	Personal data passed through from the AICC/SCORM subsystem.

▾ Survey

survey_answers database_table	A collection of answers to surveys.
userid	The ID of the user who submitted their answer.
question	The question.
answer1	Field to store the answer to a question.
answer2	Additional field to store the answer to a question.
time	The time when the answer was posted.

survey_analysis database_table	A record of survey answers analysis.
userid	The ID of the user answering the survey.
notes	Notes saved against a user's answers.

▾ Tabbed Content (Additional)

The tabbed content resource does not store or transmit personal information

▾ Turnitin Assignments (Additional)

core_files subsystem_link	Turnitin Assignment 2 stores files that have been uploaded to Moodle to form a Turnitin submission.

turnitintooltwo_users database_table	Information that links a Moodle user to a Turnitin user account and any preferences specific to Turnitin. These include default assignment settings and any Turnitin rubrics owned by them.
userid	The ID of the user being linked to a Turnitin account.
turnitin_uid	The user's Turnitin account ID.
instructor_defaults	The instructor's default assignment settings
instructor_rubrics	The Turnitin rubric scorecards that belong to the instructor
user_agreement_accepted	Indicates whether this user has accepted the Turnitin End User Licence Agreement (EULA).

turnitintooltwo_submissio ns database_table	Information about a submission that has been sent to Turnitin.
userid	The ID of the user who has made a submission.
submission_title	The title of the submission.
submission_filename	The name of the file that has been submitted to Turnitin.
submission_objectid	The ID used by Turnitin to reference the submission.
submission_score	The similarity score of the submission.
submission_grade	The grade applied by an instructor to the submission.
submission_attempts	A timestamp indicating when the user viewed feedback on their submission.
submission_modified	A timestamp indicating when the user last modified their submission.
submission_unanon	Indicates that the anonymity of a submission has been removed, making the author's identity available to the instructor.
submission_unanonreason	An explanation for the removal of an author's anonymity, supplied by their instructor.
submission_transmatch	Indicates whether Turnitin used translated matching to produce a Similarity Report for the submission.
submission_orcapable	Indicates whether Turnitin was able to produce a Similarity report for the submission.
submission_hash	A submission specific hash containing the user's ID.

turnitintooltwo_client external_location	To successfully make a submission to Turnitin, specific user data needs to be exchanged between Moodle and Turnitin. For more information around Moodle Plugins and GDPR,

please visit: https://help.turnitin.com/feedback-studio/moodle/moodle-plugins-and-gdpr.htm

email	The user's email address is shared by Moodle to enable the creation of a Turnitin account.
firstname	The user's first name is sent to Turnitin so that the user can be identified.
lastname	The user's last name is sent to Turnitin so that the user can be identified.
submission_title	The title of the submission is sent to Turntin so that it is identifiable.
submission_filename	The name of the submitted file is sent to Turntin so that it is identifiable.
submission_content	Please be aware that the content of a file/submission is sent to Turnitin for processing.

▾ Signup Sheet (Additional)

| **core_message** | Messages sent to participants via the messaging system |
| subsystem_link | |

tutorialbooking_signups	Stores the signups that participants have made to signup sheet activities
database_table	
userid	The user who signed up
sessionid	The session the user signed up to
signupdate	The date the user signed up

tutorialbooking_messages	Stores messages sent to participants through the signup sheet plugin
database_table	
sentby	The user who sent the message
senttime	The time the message was sent
subject	The subject of the message
sentto	The users that the message was sent to
message	The message that was sent

▾ URL

The URL resource plugin does not store any personal data.

▾ Vote (Additional)

vote_votes	Stores how a user has voted
database_table	
optionid	The option the user has voted for
userid	The user who voted
vote	The ranking the user gave the option

▾ Wiki

wiki_subwikis	Information about subwikis (in case of group or individual mode)
database_table	
userid	User who owns a subwiki (for individual wikis)
groupid	Group that owns a subwiki

wiki_pages	Information about wiki pages
database_table	
userid	Last user who edited the page
title	Name of the page

cachedcontent	Cached content in HTML format
timecreated	Time when page was first created
timemodified	Time when page was last modified
timerendered	Time when page was last rendered
pageviews	Number of times page was viewed
readonly	Whether a page is read-only

wiki_versions database_table	Information about wiki pages history
userid	User who created revision
content	Revision content
contentformat	Revision content format
version	Version number
timecreated	Time when revision was created

wiki_locks database_table	Temporary storage for wiki edit locks
userid	User who locked a page
sectionname	Name of the locked page section
lockedat	Date when locked

core_files subsystem_link	Files attached to subwikis

core_tag subsystem_link	Tags associated with wiki pages

core_comment subsystem_link	Comments on wiki page

▾ Workshop

workshop_submissions database_table	Holds information about workshop module submissions
workshopid	ID of the workshop activity
authorid	ID of the submission author
example	Whether this record represents an example submission
timecreated	When this record was created in the database
timemodified	When this record was last modified in the database
title	Title of the submission
content	Content of the submission
contentformat	Text format of the submission content
grade	Aggregated grade for the submission written as a decimal number from interval 0..100
gradeover	Manually overridden value of the aggregated grade
feedbackauthor	Feedback for the author
feedbackauthorformat	Text format of the feedback for the author
published	Whether the submission should be published to all participants once the workshop is closed
late	Whether the submission been submitted after the deadline

workshop_assessments database_table	Holds information about allocated assessments of workshop module submissions
submissionid	ID of the submission

reviewerid	ID of the user providing the assessment
weight	Weight of the assessment
timecreated	When this record was created in the database
timemodified	When this record was last modified in the database
grade	Aggregated grade for the submission suggested by this assessment
gradinggrade	Grade for providing this assessment
gradinggradeover	Manually overridden value of the grade for providing this assessment
feedbackauthor	Feedback for the author
feedbackauthorformat	Text format of the feedback for the author
feedbackreviewer	Feedback for the user providing the assessment
feedbackreviewerformat	Text format of the feedback for the user providing the assessment

workshop_grades database_table	Holds information about how the assessment forms were filled with grades and comments
assessmentid	ID of the assessment
strategy	Name of the grading strategy subplugin interpreting the record values
dimensionid	ID of the assessment dimension
grade	Grade in the given assessment dimension
peercomment	Comment on the given grade by the user providing the assessment
peercommentformat	Text format of the comment on the given grade

workshop_aggregations database_table	Holds aggregated grades for assessment
workshopid	ID of the workshop activity
userid	ID of the user for which aggregated grade is calculated
gradinggrade	Aggregated grade for all assessments made by the user in the given workshop activity
timegraded	When the aggregated grade was last calculated

core_files subsystem_link	Workshop module stores files embedded in / attached to the submission text

core_plagiarism subsystem_link	Workshop module has inbuilt support for plagiarism prevention systems

workshop_perpage user_preference	Number of submissions the user prefers to see on one page

▾ Authentication method

▾ CAS server (SSO)

The CAS server (SSO) authentication plugin does not store any personal data.

▾ External database

The External database authentication plugin does not store any personal data.

▾ Email-based self-registration

The Email-based self-registration authentication plugin does not store any personal data.

▾ LDAP server

The LDAP server authentication plugin does not store any personal data.

▾ LTI

The LTI authentication plugin does not store any personal data.

▾ Manual accounts

auth_manual_passwordup datetime
user_preference

The date of the last password change.

▾ MNet authentication

mnet_session
database_table

The details of each MNet user session in a remote system. The data is stored temporarily.

userid	ID of the user jumping to remote system.
username	Username of the user jumping to remote system.
token	Unique session identifier
mnethostid	Remote system MNet ID.
useragent	User agent used to access the remote system
expires	Time when the session expires.

mnet_log
database_table

Details of remote actions carried out by a local user logged in a remote system.

hostid	Remote system MNet ID.
remoteid	Remote ID of the user who carried out the action in the remote system.
time	Time when the action occurred.
userid	Local ID of the user who carried out the action in the remote system.
ip	The IP address used at the time of the action occurred.
course	Remote system course ID where the action occurred.
coursename	Remote system course full name where the action occurred.
module	Remote system module where the action occurred.
cmid	ID of the course module.
action	Action carried out by the user.
url	Remote system URL where the action occurred.
info	Additional information about the action.

moodle
external_location

This plugin can send data externally to a linked Moodle application.

address	The address of the user.
aim	The AIM identifier of the user
alternatename	An alternative name for the user.
autosubscribe	A preference as to if the user should be auto-subscribed to forums the user posts in.
calendartype	A user preference for the type of calendar to use.
city	The city of the user.
country	The country that the user is in.
currentlogin	The current login for this user.
department	The department that this user can be found in.
description	General details about this user.
email	An email address for contact.

emailstop	A preference to stop email being sent to the user.
firstaccess	The time that this user first accessed the site.
firstname	The first name of the user.
firstnamephonetic	The phonetic details about the user's first name.
icq	The ICQ number of the user.
id	The user ID
idnumber	An identification number given by the institution
imagealt	Alternative text for the user's image.
institution	The institution that this user is a member of.
lang	A user preference for the language shown.
lastaccess	The time that the user last accessed the site.
lastlogin	The last login of this user.
lastname	The surname of the user.
lastnamephonetic	The phonetic details about the user's surname.
maildigest	A setting for the mail digest for this user.
maildisplay	A preference for the user about displaying their email address to other users.
middlename	The middle name of the user
msn	The MSN identifier of the user
phone1	A phone number for the user.
pnone2	An additional phone number for the user.
picture	The picture details associated with this user.
policyagreed	A flag to determine if the user has agreed to the site policy.
skype	The Skype identifier of the user
suspended	A flag to show if the user has been suspended on this system.
timezone	The timezone of the user
trackforums	A preference for forums and tracking them.
trustbitmask	The trust bit mask
url	A URL related to this user.
username	The username for this user.
yahoo	The Yahoo identifier of the user

---

mahara external_location	This plugin can send data externally to a linked Mahara application.
address	The address of the user.
aim	The AIM identifier of the user
alternatename	An alternative name for the user.
autosubscribe	A preference as to if the user should be auto-subscribed to forums the user posts in.
calendartype	A user preference for the type of calendar to use.
city	The city of the user.
country	The country that the user is in.
currentlogin	The current login for this user.
department	The department that this user can be found in.
description	General details about this user.
email	An email address for contact.
emailstop	A preference to stop email being sent to the user.
firstaccess	The time that this user first accessed the site.
firstname	The first name of the user.
firstnamephonetic	The phonetic details about the user's first name.
icq	The ICQ number of the user.
id	The user ID
idnumber	An identification number given by the institution
imagealt	Alternative text for the user's image.

imagealt	Alternative text for the user's image.
institution	The institution that this user is a member of.
lang	A user preference for the language shown.
lastaccess	The time that the user last accessed the site.
lastlogin	The last login of this user.
lastname	The surname of the user.
lastnamephonetic	The phonetic details about the user's surname.
maildigest	A setting for the mail digest for this user.
maildisplay	A preference for the user about displaying their email address to other users.
middlename	The middle name of the user
msn	The MSN identifier of the user
phone1	A phone number for the user.
pnone2	An additional phone number for the user.
picture	The picture details associated with this user.
policyagreed	A flag to determine if the user has agreed to the site policy.
skype	The Skype identifier of the user
suspended	A flag to show if the user has been suspended on this system.
timezone	The timezone of the user
trackforums	A preference for forums and tracking them.
trustbitmask	The trust bit mask
url	A URL related to this user.
username	The username for this user.
yahoo	The Yahoo identifier of the user

▾ No login

The No login authentication plugin does not store any personal data.

▾ No authentication

The No authentication plugin does not store any personal data.

▾ OAuth 2

auth_oauth2_linked_login database_table	OAuth 2 accounts linked to a user's Moodle account.
timecreated	The timestamp when the user account was linked to the OAuth 2 login.
timemodified	The timestamp when this record was modified.
usermodified	The ID of the user who modified this account.
userid	The ID of the user account which the OAuth 2 login is linked to.
issuerid	The ID of the OAuth 2 issuer for this OAuth 2 login
username	The external username that maps to this account.
email	The external email that maps to this account.
confirmtoken	The confirmation token.
confirmtokenexpires	The timestamp when the confirmation token expires.

| **core_auth**
subsystem_link | This plugin is connected to the authentication subsystem. |

▾ Shibboleth

The Shibboleth authentication plugin does not store any personal data.

▾ Web services authentication

The Web services authentication plugin does not store any personal data.

▾ Calendar type

▾ Gregorian calendar type

The Gregorian calendar format plugin does not store any personal data.

▾ Custom field

▾ Checkbox

The Checkbox field type plugin doesn't store any personal data; it uses tables defined in core.

▾ Date and time

The Date and time field type plugin doesn't store any personal data; it uses tables defined in core.

▾ Dropdown menu

The Dropdown menu field type plugin doesn't store any personal data; it uses tables defined in core.

▾ Short text

The Short text field type plugin doesn't store any personal data; it uses tables defined in core.

▾ Text area

The Text area field type plugin doesn't store any personal data; it uses tables defined in core.

▾ Enrolment method

▾ Category enrolments

The Category enrolments plugin does not store any personal data.

▾ Cohort sync

core_group subsystem_link	Enrol cohort plugin can create a new group or use an existing group to add all the members of the cohort.

▾ External database

The External database enrolment plugin does not store any personal data.

▾ Flat file (CSV)

enrol_flatfile database_table	The Flat file (CSV) enrolment plugin may store personal data relating to future enrolments in the enrol_flatfile table.
action	The enrolment action expected on the given date
roleid	The ID of the role to be assigned or unassigned

userid	The ID of the user to which the role assignment relates
courseid	The course ID to which the enrolment relates
timestart	The time when the enrolment starts
timeend	The time when the enrolment ends
timemodified	The time when the enrolment is modified

▾ Guest access

The Guest access enrolment plugin does not store any personal data.

▾ IMS Enterprise file

The IMS Enterprise file enrolment plugin does not store any personal data.

▾ LDAP enrolments

The LDAP enrolments plugin does not store any personal data.

▾ Publish as LTI tool

enrol_lti_users database_table	The list of users enrolled via an LTI provider
userid	The ID of the user
lastgrade	The last grade the user was recorded of having
lastaccess	The time when the user last accessed the course
timecreated	The time when the user was enrolled

▾ Manual enrolments

The Manual enrolments plugin does not store any personal data.

▾ Module meta link

| core_group
subsystem_link | Enrol meta plugin can create a new group or use an existing group to add all the participants of the course linked. |

▾ MNet remote enrolments

The MNet remote enrolments plugin does not store any personal data.

▾ Student record system (Additional)

core_enrol subsystem_link	The plugin creates student enrolments based on data passed from the student records system.
core_files subsystem_link	Instruction files containing personal information from the student record system may be manually loaded into Moodle, where they will be processed by an adhock task. They are deleted when the task completes.
core_user subsystem_link	The plugin creates user accounts based on data from the student records system.
enrol_nottingham	The plugin may store personal information about users when instructions relating to them

enrol_nottingham database_table	The plugin may store personal information about users when instructions relating to them from the student records system fail to process correctly.
event	The type of event the log entry is for.
status	Stores if the issue has been resolved.
courseidnumber	The id number of the course the log is related to.
useridnumber	The id number in the student records system of the user.
data	Encoded details related to the request, it may include user personal information required to create a user account.
created	The time that the log was generated at.
updated	The time the log entry was last updated.

▾ PayPal

paypal.com external_location	The PayPal enrolment plugin transmits user data from Moodle to the PayPal website.
os0	Full name of the buyer.
custom	A hyphen-separated string that contains ID of the user (the buyer), ID of the course, ID of the enrolment instance.
first_name	First name of the user who is buying the course.
last_name	Last name of the user who is buying the course.
address	Address of the user who is buying the course.
city	City of the user who is buying the course.
email	Email address of the user who is buying the course.
country	Country of the user who is buying the course.

enrol_paypal database_table	Information about the PayPal transactions for PayPal enrolments.
business	Email address or PayPal account ID of the payment recipient (that is, the merchant).
receiver_email	Primary email address of the payment recipient (that is, the merchant).
receiver_id	Unique PayPal account ID of the payment recipient (i.e., the merchant).
item_name	The full name of the course that its enrolment has been sold.
courseid	The ID of the course that is sold.
userid	The ID of the user who bought the course enrolment.
instanceid	The ID of the enrolment instance in the course.
memo	A note that was entered by the buyer in PayPal website payments note field.
tax	Amount of tax charged on payment.
option_selection1_x	Full name of the buyer.
payment_status	The status of the payment.
pending_reason	The reason why payment status is pending (if that is).
reason_code	The reason why payment status is Reversed, Refunded, Canceled_Reversal, or Denied (if the status is one of them).
txn_id	The merchant's original transaction identification number for the payment from the buyer, against which the case was registered
parent_txn_id	In the case of a refund, reversal, or canceled reversal, this would be the transaction ID of the original transaction.
payment_type	Holds whether the payment was funded with an eCheck (echeck), or was funded with PayPal balance, credit card, or instant transfer (instant).
timeupdated	The time of Moodle being notified by PayPal about the payment.

▾ Self enrolment

The Self enrolment plugin does not store any personal data.

Notification plugin

Mobile

core_user subsystem_link	This plugin is connected to the user subsystem.
message_airnotifier_devices database_table	Airnotifier device information is stored here.
userdeviceid	The ID linking to the user's mobile device
enabled	Whether the airnotifier device is enabled.

External airnotifier site. external_location	This information is sent to an external site to be ultimately delivered to the mobile device of the user.
userid	The ID of the user who sent the message.
username	The username of the user.
userfromid	The user ID of the author of the message.
userfromfullname	The full name of the user who sent the message.
date	The date that the message was sent.
subject	The subject line of the message.
notification	If this message is a notification.
smallmessage	A section of the message.
fullmessage	The full message.

Email

message_email_messages database_table	The list of users enrolled via an LTI provider
useridto	The ID of the user receiving the message
conversationid	The ID of the conversation being sent to
messageid	The ID of the message being sent

smtp external_location	This information is sent to an external SMTP server to be ultimately delivered as an email to the recipient.
recipient	The recipient of the message.
userfrom	The user sending the message.
subject	The subject line of the message.
fullmessage	The full message in a given format.
fullmessagehtml	The full version of the message.
attachment	A file on the filesystem.
attachname	The name of the attached file (extension indicates MIME).
replyto	The email address to reply to.
replytoname	Name of reply to recipient.

Jabber

External Jabber server. external_location	This information is sent to an external Jabber server to be ultimately delivered as a notification message to the recipient.
userto	The recipient of the notification message.
userfrom	The user sending the notification message.
smallmessage	A section of the message.

contexturl   The URL to view the event.

▾ Web

The messaging Web plugin does not store any personal data.

▾ Block

▾ Activities

The Activities block only shows data stored in other locations.

▾ Activity results

The Activity results block only shows data stored in other locations.

▾ Admin bookmarks

The Admin bookmarks block only shows data stored in other locations.

▾ Latest badges

The Latest badges block only shows data stored in other locations.

▾ Blog menu

The Blog menu block only shows data stored in other locations.

▾ Recent blog entries

The Recent blog entries block only shows data stored in other locations.

▾ Blog tags

The Blog tags block only shows data stored in other locations.

▾ Calendar

The Calendar block only displays existing calendar data.

▾ Upcoming events

The Upcoming events block only displays existing calendar data.

▾ Comments

core_comment   A record of comments added.
subsystem_link

▾ Module completion status

The Course completion status block only shows information about course completion and does not store any data of its own.

▼ Module list

The Courses block only shows data about courses and does not store any data itself.

▼ Module/Site description

The Course/site summary block only shows information about courses and does not store data itself.

▼ Module Import (Additional)

core_backup subsystem_link	Creates backups of course information to transfer it into another Moodle course.
block_courseimport database_table	Stores a list of import jobs that have been queued.
source	The course that data is being exported from.
target	The course that is being imported into.
userid	The user who created the job.
backupid	The id of the backup file that has been created.
status	The status of the import.
timecreated	The time the import job was created.
timemodified	The last time the job was updated.

▼ Year end and archive (Additional)

This plugin does not store any user information. When a user submits a request form their name and e-mail address will be sent by e-mail to an admin.

▼ Curriculum map (Additional)

No personal information is stored, or transmitted to or from Moodle, by this block.

▼ BS Enrol Block (Additional)

The plugin allows users to become enroled on a course if they access to it on another specific role. It does not store any personal information to do this.

▼ Feedback

The Feedback block only shows data stored in other locations.

▼ Global search

The Global search block only shows data stored in other locations.

▼ Random glossary entry

The Random glossary entry block only shows data stored in other locations.

▼ Medical School Search (Additional)

The search block does not store any personal data, it does query a search engine and may recieve personal information from that which will be displayed to the user who made the search.

| block | The HTML block stores all of its data within the block subsystem. |

subsystem_link

▾ Kaltura Media Gallery (Additional)

The Kaltura Media Gallery block only displays a link to Kaltura Media Gallery local plugin

▾ Login

The Login block only provides a way to log in and does not store any data itself.

▾ Learning plans

The Learning plans block only shows data stored in other locations.

▾ Medical School Formulary (Additional)

The formulary does not store any personal information.

▾ Medicine course links (Additional)

kpacs_link	A time limited key is sent to the Medical School clinical image library to authenticate the
external_location	user when they click on a link to it.
username	The user name of the user clicking the link is transmitted to the system.
ipaddress	The IP address of the user accessing the system is transmitted
time	The time at which the time limited key is generated.

macs_link	A time limited key is sent to the Mandatory Assesment of Clinical Skills system to
external_location	authenticate the user when they click on a link to it.
username	The user name of the user clicking the link is transmitted to the system.
ipaddress	The IP address of the user accessing the system is transmitted
time	The time at which the time limited key is generated.

cp1aloc_link	A time limited key is sent to the Medicine Allocations system to authenticate the user when
external_location	they click on a link to it.
username	The user name of the user clicking the link is transmitted to the system.
ipaddress	The IP address of the user accessing the system is transmitted
time	The time at which the time limited key is generated.

electives_link	A time limited key is sent to the Electives placement system to authenticate the user when
external_location	they click on a link to it.
username	The user name of the user clicking the link is transmitted to the system.
ipaddress	The IP address of the user accessing the system is transmitted
time	The time at which the time limited key is generated.

▾ Mentees

The Mentees block only shows data stored in other locations.

▾ Login

▾ Network servers

The Network servers block only allows interaction with Network servers and neither stores or exports data itself.

▾ Module overview

block_myoverview_user_sort_preference user_preference	The Module overview block sort preference.
block_myoverview_user_view_preference user_preference	The Module overview block view preference.
block_myoverview_user_grouping_preference user_preference	The Module overview block grouping preference.
block_myoverview_user_paging_preference user_preference	The Module overview block paging preference.

▾ Logged in user

The Logged in user block only shows information about the logged in user and does not store data itself.

▾ Navigation

The Navigation block only shows data stored in other locations.

▾ Latest announcements

The Latest announcements block only shows data stored in the forum and does not store data itself.

▾ BS Nexus (Additional)

core_cache subsystem_link	Responses from the Nexus server are stored temporarily in the cache to improve Moodle performance and reduce the number of requests sent to Nexus.
nexus external_location	Personal data is sent to Nexus so that personalised links can be displayed to the user in Moodle that will allow them to access their information in Nexus.
userid	The Moodle id of the user is sent.
username	The username of the user is sent, to help identify user to Nexus.
course	Details of the course the user is accessing are sent, so that the correct response can be sent to Moodle.
firstname	The first name(s) of the user is sent to help identify them correctly.
lastname	The last name(s) of the user is sent to help identify them correctly.

▾ Open Educational Resources (Additional)

The block does not store or transmit any personal information.

▾ Online users

block_online_users_uservisibility	Online status visible to other users in the Online users block.

user_preference

▾ Private files

The Private files block only provides a view of, and a link to, the user's private files.

▾ Quiz results (disabled)

The Quiz results block only shows data stored in other locations.

▾ Module Resources (Additional)

This plugin does not store or transmit any personal data.

▾ Recent activity

block_recent_activity database_table	Temporary log of recent teacher activity. Removed after two days
courseid	Course ID
cmid	Course activity ID
timecreated	Time when action was performed
userid	User performing the action
action	Action: created, updated or deleted
modname	Module type name (for delete action)

▾ Recently accessed modules

The Recently accessed modules block does not store any personal data.

▾ Recently accessed items

block_recentlyaccessedite ms database_table	The Recently accessed items block stores information about items that the user accessed recently
userid	The ID of the user who accessed the item
courseid	Course the item belongs to
cmid	The ID of the activity or resource
timeaccess	The time when the user last accessed the item

▾ Remote RSS feeds

block_rss_client database_table	RSS block information is stored here.
userid	The ID of the user that added the RSS feed.
title	The title of the RSS feed.
preferredtitle	The preferred (custom) title of the RSS feed.
description	The description of the RSS feed.
shared	If the RSS feed is available to all courses.
url	The URL of the RSS feed.
skiptime	The defined time in seconds that the cron will wait between attempts to retry failing RSS feeds.
skipuntil	The maximum defined time that the cron will attempt to open failing RSS feeds.

skipuntil | The maximum defined time that the cron will attempt to open failing RSS feeds.

▾ Search forums

The Search forums block only shows data stored in other locations.

▾ Section links

The Section links block only shows data stored in other locations.

▾ Self completion

The Self completion block only shows data stored in other locations.

▾ Administration

The Administration block only shows data stored in other locations.

▾ Main menu

The Main menu block only shows data stored in other locations.

▾ Social activities

The Social activities block only shows data stored in other locations.

▾ Starred modules

The starred modules block does not store any personal data.

▾ Flickr

flickr.com external_location	The Flickr block plugin does not store any personal data, but does transmit user data from Moodle to the remote system.
tags	The tag values sent as CSV format to search for Flickr images.

▾ YouTube

The YouTube block only shows data stored in other locations.

▾ Tags

The Tags block only shows data stored in other locations.

▾ Timeline

block_timeline_user_sort_preference user_preference	The user sort preference for the timeline block.
block_timeline_user_filter_preference user_preference	The user day filter preference for the timeline block.
block_timeline_user_limit	The user page limit preference for the timeline block.

block_timeline_user_limit_
preference
The user page limit preference for the timeline block.
user_preference

▾ Media player

▾ HTML5 audio

The HTML5 audio media plugin does not store any personal data.

▾ HTML5 video

The HTML5 video media plugin does not store any personal data.

▾ Flash animation

The Flash animation media plugin does not store any personal data.

▾ Activity names auto-linking

The Activity names auto-linking plugin does not store any personal data.

▾ Algebra notation

The Algebra notation plugin does not store any personal data.

▾ Word censorship

The Word censorship plugin does not store any personal data.

▾ Database auto-linking

The Database auto-linking plugin does not store any personal data.

▾ Display H5P

The display H5P filter does not store any personal data.

▾ Echo360 LTI Launch Filter (Additional)

echo360.com
The Echo360 LTI Launch Filter plugin does not store any personal data, but does transmit

The Echo360 LTI Launch Filter plugin does not store any personal data, but does transmit user and context data to integrate with Echo360.

userid	The ID of the user accessing the Echo360 LTI Launch Filter
fullname	The fullname of the user accessing the Echo360 LTI Launch Filter
firstname	The firstname of the user accessing the Echo360 LTI Launch Filter
lastname	The lastname of the user accessing the Echo360 LTI Launch Filter
email	The email address of the user accessing the Echo360 LTI Launch Filter
roles	The roles in the course for the user accessing the Echo360 LTI Launch Filter
courseid	The ID of the course the user is accessing the Echo360 LTI Launch Filter
courseshortname	The shortname of the course the user is accessing the Echo360 LTI Launch Filter
coursefullname	The fullname of the course the user is accessing the Echo360 LTI Launch Filter

▾ Email protection

The Email protection plugin does not store any personal data.

▾ Display emoticons as images

The Display emoticons as images plugin does not store any personal data.

▾ Glossary auto-linking

The Glossary auto-linking plugin does not store any personal data.

▾ Media Resources (Additional)

The Kaltura Media filter does not store any personal data.

▾ MathJax

The MathJax plugin does not store any personal data.

▾ Multimedia plugins

The Multimedia plugins plugin does not store any personal data.

▾ Medical School formulary auto-linking (Additional)

This plugin does not store or transmit any personal data.

▾ Multi-Language Content

The Multi-Language Content plugin does not store any personal data.

▾ TeX notation

The TeX notation plugin does not store any personal data.

▾ HTML tidy

The HTML tidy plugin does not store any personal data.

▾ Convert URLs into links and images

The Convert URLs into links and images plugin does not store any personal data.

▾ Editor

▾ Atto HTML editor

editor_atto_autosave database_table	Automatically saved text editor drafts.
userid	The ID of the user whose data was saved.
drafttext	The text which was saved.
timemodified	The time that content was modified.

▾ Superscript/subscript editor (Additional)

The Superscript/subscript editor plugin does not store any personal data.

▾ Plain text area

The Plain text area editor plugin does not store any personal data.

▾ TinyMCE HTML editor

The TinyMCE HTML editor plugin does not store any personal data.

▾ Module format

▾ Curriculum map format (Additional)

This plugin does not store or transmit any personal data.

▾ Single activity format

The Single activity format plugin does not store any personal data.

▾ Social format

The Social format plugin does not store any personal data.

▾ Timetable format (Additional)

format_timetable database_table	Stores information about timetabled events imported from the timetable system. We cannot link it directly to a Moodle user, so it does not form part of an export.
guid	The uniquie id of the activity in the academic year on the timetable system.
module_code	The code of the module the activity is part of.
module_guid	The unique identifier of the module in an academic year on the titmetable system.
academic_year	The academic year of the activity.
activity_code	The code of the activity.
activity_type	The type of activity.
startdate	The time and date the activity starts at.
enddate	The end time and date of the activity.
week	The week of the academic year the activity is in.

description	The name of the activity.
location	The location the activity takes place.
staff	The names of the staff teaching the activity.
last_updated	The last time the record was updated.

▾ Collapsed Topics (Additional)

| **topcoll_toggle** | The state of the toggles on a course. |
| user_preference | |

▾ Topics format

The Topics format plugin does not store any personal data.

▾ Weekly format

The Weekly format plugin does not store any personal data.

▾ Data format

▾ Comma separated values (.csv)

The CSV data format plugin does not store any personal data.

▾ Microsoft Excel (.xlsx)

The Excel data format plugin does not store any personal data.

▾ HTML table

The HTML table data format plugin does not store any personal data.

▾ Javascript Object Notation (.json)

The JavaScript Object Notation (JSON) data format plugin does not store any personal data.

▾ OpenDocument (.ods)

The OpenDocument data format plugin does not store any personal data.

▾ Portable Document Format (.pdf)

The PDF data format plugin does not store any personal data.

▾ University of Nottingham Business School (.txt) (Additional)

The University of Nottingham Business School data format plugin does not store any personal data.

▾ Profile field type

▾ Checkbox

| **user_info_data** | Additional profile data |
| database_table | |

userid	The ID of the user whose data is stored by the Checkbox user profile field
fieldid	The ID of the profile field
data	The checkbox user profile field user data
dataformat	The format of Checkbox user profile field user data

▾ Date/Time

user_info_data database_table	Additional profile data
userid	The ID of the user whose data is stored by the Date/time user profile field
fieldid	The ID of the profile field
data	Date/time user profile field user data
dataformat	The format of Date/time user profile field user data

▾ Drop-down menu

user_info_data database_table	Additional profile data
userid	The ID of the user whose data is stored by the drop-down menu user profile field
fieldid	The ID of the profile field
data	Drop-down menu user profile field user data
dataformat	The format of the drop-down menu user profile field user data

▾ Text input

user_info_data database_table	Additional profile data
userid	The ID of the user whose data is stored by the Text input user profile field
fieldid	The ID of the profile field
data	Text input user profile field user data
dataformat	The format of Text input user profile field user data

▾ Text area

user_info_data database_table	Additional profile data
userid	The ID of the user whose data is stored by the Text area user profile field
fieldid	The ID of the profile field
data	Text area user profile field user data
dataformat	The format of Text area user profile field user data

▾ Site report

▾ Backups report

The Backups reports plugin does not store any personal data.

▾ Competency breakdown

The Competency breakdown plugin does not store any personal data.

▾ Module completion

The Course completion report only shows data stored in other locations.

▾ Config changes

The Config changes plugin does not store any personal data.

▾ Module overview

The Course overview plugin does not store any personal data.

▾ Events list

The Events list plugin does not store any personal data.

▾ Forecasting report (Additional)

report_forecastingsetting database_table	Stores settings for a report run by the plugin.
setting	JSON encoded settings.
timecreated	Stores the time the record was created.

▾ Insights

The Insights plugin does not store any personal data.

▾ Logs

The Logs plugin does not store any personal data.

▾ Live logs

The Live logs plugin does not store any personal data.

▾ Activity report

The Activity report plugin does not store any personal data.

▾ Module participation

The Course participation plugin does not store any personal data.

▾ Performance overview

The Performance overview plugin does not store any personal data.

▾ Activity completion

The Activity completion report only shows data stored in other locations.

▾ Question instances

The Question instances plugin does not store any personal data.

▾ Security overview

The Security overview plugin does not store any personal data.

▾ Statistics

stats_user_daily database_table	Records basic statistics about user interaction in courses.
courseid	An identifier for a course
userid	The user ID linked to this table.
roleid	The role ID of the user.
timeend	End time of logs view
statsreads	Views of content
statswrites	Content made in the course.
stattype	The type of stat being recorded

stats_user_weekly database_table	Records basic statistics about user interaction in courses.
courseid	An identifier for a course
userid	The user ID linked to this table.
roleid	The role ID of the user.
timeend	End time of logs view
statsreads	Views of content
statswrites	Content made in the course.
stattype	The type of stat being recorded

stats_user_monthly database_table	Records basic statistics about user interaction in courses.
courseid	An identifier for a course
userid	The user ID linked to this table.
roleid	The role ID of the user.
timeend	End time of logs view
statsreads	Views of content
statswrites	Content made in the course.
stattype	The type of stat being recorded

▾ User sessions report

The User sessions report plugin does not store any personal data.

▾ Module report

▾ Grade export method

▾ OpenDocument spreadsheet

The OpenDocument spreadsheet grade export plugin does not store any personal data.

▾ Plain text file

The Plain text file grade export plugin does not store any personal data.

▾ Excel spreadsheet

The Excel spreadsheet grade export plugin does not store any personal data.

▾ XML file

The XML file grade export plugin does not store any personal data.

▾ Grade import method

▾ CSV file

The import grades from CSV plugin does not store any personal data.

▾ Paste from spreadsheet

The import grades from copied spreadsheed plugin does not store any personal data.

▾ XML file

The import grades from XML plugin does not store any personal data.

▾ Gradebook report

▾ Grader report

grade_report_showcalculations user_preference	Whether a calculator icon for each grade item and category with a visual indicator that a grade item is calculated is displayed or not when editing is turned on
grade_report_showeyecons user_preference	Whether to display the show/hide icon for each grade for controlling its visibility to the student
grade_report_showaverages user_preference	Whether to display an additional row with the average (mean) for each category and grade item
grade_report_showlocks user_preference	Whether to display a lock/unlock icon for each grade for controlling if the grade can be automatically updated by the related activity when editing is turned on
grade_report_showuserimage user_preference	Whether to show the user's profile image next to the name
grade_report_showactivityicons user_preference	Whether to show the activity icons next to activity names
grade_report_showranges user_preference	Whether to display an additional row with the range for each category and grade item
grade_report_showanalysisicon user_preference	Whether to show grade analysis icon by default. If the activity module supports it, the grade analysis icon links to a page with more detailed explanation of the grade and how it was obtained.

grade_report_rangesdispl aytype user_preference	Whether the range is displayed as real grades, percentages or letters, or whether the display type for the category or grade item is used (inherit)
grade_report_rangesdeci malpoints user_preference	The number of decimal places to display for each range or whether the overall decimal places setting for the category or grade item is used (inherit)
grade_report_averagesdis playtype user_preference	Whether the average (mean) is displayed as real grades, percentages or letters, or whether the display type for the category or grade item is used (inherit).
grade_report_averagesde cimalpoints user_preference	The number of decimal places to display for each average or whether the overall decimal places setting for the category or grade item is used (inherit).
grade_report_meanselecti on user_preference	Whether cells with no grade should be included when calculating the average (mean) for each category or grade item
grade_report_shownumbe rofgrades user_preference	Whether to display in brackets after each average the number of grades used when calculating the average
grade_report_quickgradin g user_preference	Whether to display a text input box for each grade, allowing many grades to be edited at the same time
grade_report_showquickf eedback user_preference	Whether to display a feedback text input box with a dotted border for each grade, allowing the feedback for many grades to be edited at the same time
grade_report_studentsper page user_preference	The number of students displayed per page in the grader report
grade_report_showonlyac tiveenrol user_preference	Whether to display only active enrolled users (not suspended) in gradebook report or all the enrolled users
grade_report_aggregation position user_preference	Whether the category and course total columns are displayed first or last in the gradebook reports
grade_report_enableajax user_preference	Whether to add a layer of AJAX functionality to the grader report, simplifying and speeding up common operations
grade_report_grader_colla psed_categories user_preference	List of gradebook categories to be collapsed

▾ Grade history

The Grade history report only shows data stored in other locations.

▾ Outcomes report

The Grade outcomes report only shows data stored in other locations.

▾ Overview report

The Grade overview report only shows data stored in other locations.

▾ Single view

The Grade single view report only shows data stored in other locations.

▾ User report

gradereport_user_view_user user_preference	Whether to view report as current user or another user in the gradebook reports

▾ Advanced grading method

▾ Marking guide

gradingform_guide_fillings database_table	Stores information about a user's grade and feedback for the marking guide.
instanceid	An identifier to a grade used by an activity.
criterionid	An identifier to a criterion for advanced marking.
remark	Remarks related to this grade criterion.
score	A score for this grade criterion.
gradingform_guide-showmarkerdesc user_preference	Whether to show marker criterion descriptions
gradingform_guide-showstudentdesc user_preference	Whether to show student criterion descriptions

▾ Rubric

gradingform_rubric_fillings database_table	Stores information about the user's grade created by the rubric.
instanceid	An identifier relating to a grade in an activity.
criterionid	An identifier for a specific criterion being graded.
levelid	The level obtained in the rubric.
remark	Remarks related to the rubric criterion being assessed.

▾ Machine learning backend

▾ PHP machine learning backend

The PHP machine learning backend plugin does not store any personal data.

▾ Python machine learning backend

The Python machine learning backend plugin does not store any personal data.

▾ MNet service

▾ Remote enrolment service

mnetservice_enrol_enrolments database_table	The Remote enrolment service stores information about enrolments of local users in courses on remote hosts.
hostid	The ID of the remote MNet host
userid	The ID of the local user on this server
remotecourseid	The ID of the course on the remote server
rolename	The name of role on the remote server
enroltime	The time when the enrolment was modified
enroltype	The enrolment type on the remote server used to enrol the user in their course

▾ Webservice protocol

▾ REST protocol

The REST protocol plugin does not store any personal data.

▾ SOAP protocol

The SOAP protocol plugin does not store any personal data.

▾ XML-RPC protocol

The XML-RPC protocol plugin does not store any personal data.

▾ Repository

▾ Embedded files

The Embedded files repository plugin does not store or transmit any personal data.

▾ Box

box.com external_location	The Box repository plugin does not store any personal data, but does transmit user data from Moodle to the remote system.
query	The Box repository user search text query.

▾ acy module files

The Legacy course files repository plugin does not store or transmit any personal data.

▾ Dropbox

dropbox.com external_location	The Dropbox repository plugin does not store any personal data, but does transmit user data from Moodle to the remote system.
query	The Dropbox repository user search text query.

▾ EQUELLA repository

The EQUELLA repository plugin does not store any personal data, but does transmit user data from Moodle to the remote system.

▾ File system

The File system repository plugin does not store or transmit any personal data.

▾ Flickr

flickr.com external_location	The Flickr repository plugin does store user preferences, and transmits user data from Moodle to the remote system.
text	The Flickr repository user search text query.
repository_flickr_access_token user_preference	The Flickr repository OAuth token preference.
repository_flickr_access_token_secret user_preference	The Flickr repository OAuth secret preference; this is excluded from privacy data exports.

▾ Flickr public

flickr.com external_location	The Flickr public repository plugin does not store any personal data, but does transmit user data from Moodle to the remote system.
author	The Flickr public repository content author.
email_address	The Flickr public repository user email address.
text	The Flickr public repository user search text.
user_id	The Flickr public repository user ID.

▾ Google Drive

drive.google.com external_location	The Google Drive repository plugin does not store any personal data, but does transmit user data from Moodle to the remote system.
email	The email of the Google Drive repository user.
searchtext	The Google Drive repository user search text query.

▾ Server files

The Server files repository plugin does not store or transmit any personal data.

▾ Merlot.org

merlot.org external_location	The Merlot.org repository plugin does not store any personal data, but does transmit user data from Moodle to the remote system.
author	The Merlot.org repository content author.
keywords	The Merlot.org repository user search text query.
licencekey	The Merlot.org repository licence key.

▾ Nextcloud

The Nextcloud repository plugin neither stores any personal data nor transmits user data to the remote system.

▾ Microsoft OneDrive

onedrive.live.com external_location	The Microsoft OneDrive repository stores temporary access grants, and transmits user data from Moodle to the remote system.
searchtext	The Microsoft OneDrive repository user search text query.

repository_onedrive_acces s database_table	The Microsoft OneDrive repository stores temporary access grants, and transmits user data from Moodle to the remote system.
itemid	The Microsoft OneDrive with a temporary access grant item ID.
permissionid	The Microsoft OneDrive temporary access grant permission ID.
timecreated	The Microsoft OneDrive temporary access grant creation date/time.
timemodified	The Microsoft OneDrive temporary access grant modification date/time.
usermodified	The ID of the user modifying the Microsoft OneDrive temporary access grant.

▾ Picasa web album

picasa.google.com external_location	The Picasa web album repository plugin does not store any personal data, but does transmit user data from Moodle to the remote system.
search_text	The Picasa repository user search text query.

▾ Recent files

The Recent files repository plugin does not store or transmit any personal data.

▾ Amazon S3

The Amazon S3 repository plugin does not store any personal data, but does transmit user data from Moodle to the remote system.

▾ Microsoft OneDrive (legacy)

The Microsoft OneDrive (legacy) repository plugin does not store any personal data, but does transmit user data from Moodle to the remote system.

▾ Upload a file

The Upload a file repository plugin does not store or transmit any personal data.

▾ URL downloader

The URL downloader repository plugin does not store or transmit any personal data.

▾ Private files

The Private files repository plugin does not store or transmit any personal data.

▾ WebDAV repository

The WebDAV repository plugin does not store any personal data, but it is transmitted from Moodle to the remote system.

▾ Wikimedia

wikimedia.org external_location	The Wikimedia repository plugin does store user preferences, and transmits user data from Moodle to the remote system.
search_text	The Wikimedia repository user search text query.
repository_wikimedia_maxwidth user_preference	The user preference max width configured for the Wikimedia repository
repository_wikimedia_maxheight user_preference	The user preference Max Height configured for the Wikimedia repository.

▾ Flickr public (Xpert) (Additional)

The Xpert Flickr public repository does not store or transmit Moodle users personal information. It does recieve information about the author of the images in search results for from Flickr. When an image is selected the author's name is baked into the copyright attribution part of the stored image.

▾ Upload and attribute a file (Xpert) (Additional)

The Xpert upload and attribute a file repository does not store or transmit any personal information.

▾ URL downloader (Xpert) (Additional)

The Xpert URL downloader repository does not store or transmit any personal information.

▾ YouTube videos

youtube.com external_location	The YouTube videos repository plugin does not store any personal data, but does transmit user data from Moodle to the remote system.
searchtext	The YouTube videos repository user search text query

▾ Portfolio

▾ Box

box.net external_location	This plugin sends data externally to a linked Box account. It does not store data locally.
data	Personal data passed through from the portfolio subsystem.

▾ File download

This plugin does not store personal data, nor does it export personal data to an external location.

▾ Flickr.com

flickr.com external_location	This plugin sends data externally to a linked Flickr account. It does not store data locally.
data	Personal data passed through from the portfolio subsystem.

▾ Google Drive

docs.google.com external_location	This plugin sends data externally to a linked Google account. It does not store data locally.
data	Personal data passed through from the portfolio subsystem.

▾ Mahara ePortfolio

mahara external_location	This plugin sends data externally to a linked Mahara application. It does not store data locally.
data	Personal data passed through from the portfolio subsystem.

▾ Picasa

picasa.google.com external_location	This plugin sends data externally to a linked Picasa account. It does not store data locally.
data	Personal data passed through from the portfolio subsystem.

▾ Search engine

▾ Simple search

search_simpledb_index database_table	Indexed contents
docid	Document ID (unique)
itemid	Item identifier (in search area scope)
title	Title
content	Contents
contextid	Document context ID
areaid	Search area ID
type	Document type
courseid	Course ID
owneruserid	Document owner user ID
modified	Last modification time
userid	Document user ID
description1	Extra description field
description2	Extra description field

▾ Solr

solr external_location	This plugin sends data externally to a linked Solr search engine. It does not store data locally.
data	Personal data passed through from the search subsystem.

▾ Question behaviour

▾ Adaptive mode

The Adaptive mode question behaviour plugin does not store any personal data.

▾ Adaptive mode (no penalties)

▾ Adaptive mode (no penalties)

The Adaptive mode (no penalties) question behaviour plugin does not store any personal data.

▾ Deferred feedback with CBM

The Deferred feedback with CBM question behaviour plugin does not store any personal data.

▾ Deferred feedback

The Deferred feedback behaviour plugin does not store any personal data.

▾ Immediate feedback with CBM

The Immediate feedback with CBM question behaviour plugin does not store any personal data.

▾ Immediate feedback

The Immediate feedback question behaviour plugin does not store any personal data.

▾ Behaviour for information items

The Information items question behaviour plugin does not store any personal data.

▾ Interactive with multiple tries

The Interactive with multiple tries question behaviour plugin does not store any personal data.

▾ Interactive with multiple tries (credit for earlier tries)

The Interactive with multiple tries (credit for earlier tries) question behaviour plugin does not store any personal data.

▾ Manually graded

The Manually graded question behaviour plugin does not store any personal data.

▾ Missing behaviour

The Missing question behaviour plugin does not store any personal data.

▾ Question import/export format

▾ Aiken format

The Aiken question format plugin does not store any personal data.

▾ Blackboard

The Blackbard question format plugin does not store any personal data.

▾ Examview

The Examview question format plugin does not store any personal data.

▾ GIFT format

The GIFT question format plugin does not store any personal data.

▾ Missing word format

The Missing word question format plugin does not store any personal data.

▾ Embedded answers (Cloze)

The Embedded answers question plugin does not store any personal data.

▾ WebCT format

The WebCT question format plugin does not store any personal data.

▾ XHTML format

The XHTML question format plugin does not store any personal data.

▾ Moodle XML format

The XML question format plugin does not store any personal data.

▾ Plagiarism plugin

▾ Turnitin plagiarism plugin (Additional) (Userlist provider missing)

core_files subsystem_link	Turnitin Assignment stores files that have been uploaded to Moodle to form a Turnitin submission.
plagiarism_turnitin_files database_table	Information that links a Moodle submission to a Turnitin submission.
userid	The ID of the user who has made a submission.
similarityscore	The similarity score of the submission.
attempt	A timestamp indicating when the user viewed feedback on their submission.
transmatch	Indicates whether Turnitin used translated matching to produce a Similarity Report for the submission.
lastmodified	A timestamp indicating when the user last modified their submission.
grade	The grade applied by an instructor to the submission.
orcapable	Indicates whether Turnitin was able to produce a similarity report for the user's submission.
student_read	Indicates whether a student has read their feedback.
plagiarism_turnitin_users database_table	Information about Plagiarism Plugin Users.
userid	The ID of the user who uses this plugin.
plagiarism_turnitin_client external_location	To successfully make a submission to Turnitin, specific user data needs to be exchanged between Moodle and Turnitin. For more information around Moodle Plugins and GDPR, please visit: https://help.turnitin.com/feedback-studio/moodle/moodle-plugins-and-gdpr.htm
email	The user's email address is shared by Moodle to enable the creation of a Turnitin account.
firstname	The user's first name is sent to Turnitin so that the user can be identified.
lastname	The user's last name is sent to Turnitin so that the user can be identified.

submission_title	The title of the submission is sent to Turntin so that it is identifiable.
submission_filename	The name of the submitted file is sent to Turntin so that it is identifiable.
submission_content	Please be aware that the content of a file/submission is sent to Turnitin for processing.

▾ Admin tool

▾ Analytic models

The Analytic models plugin does not store any personal data.

▾ Availability condition management

The Availability condition management plugin does not store any personal data.

▾ Acceptance testing

The Acceptance testing plugin does not store any personal data.

▾ Capability overview

The Capability overview plugin does not store any personal data.

▾ Cohort roles management

tool_cohortroles database_table	The Cohort roles management plugin stores user cohort role mappings.
id	The ID of the cohort role mapping record
cohortid	The ID of the cohort
roleid	The ID of the role
userid	The ID of the user
timecreated	The time when the cohort role mapping was created
timemodified	The time when the cohort role mapping was modified
usermodified	The ID of the user who last modified the cohort role mapping

▾ Language customisation

The Language customisation plugin does not store any personal data.

▾ Data privacy

tool_dataprivacy_request database_table	Information from personal data requests (subject access and deletion requests) made for this site.
comments	Any user comments accompanying the request.
userid	The ID of the user to whom the request belongs
requestedby	The ID of the user making the request, if made on behalf of another user.
dpocomment	Any comments made by the site's privacy officer regarding the request.
timecreated	The timestamp indicating when the request was made by the user.

tool_dataprivacy_request-filters user_preference	The filters currently applied to the data requests page.

tool_dataprivacy_request-perpage	The number of data requests the user prefers to see on one page
user_preference	

▾ Database transfer

The Database transfer plugin does not store any personal data.

▾ File types

The File types plugin does not store any personal data.

▾ Random module generator

The Development data generator plugin does not store any personal data.

▾ HTTPS conversion tool

The HTTPS conversion tool plugin does not store any personal data.

▾ Convert to InnoDB

The Convert to InnoDB plugin does not store any personal data.

▾ Plugin installer

The Plugin installer plugin does not store any personal data.

▾ Language packs

The Language packs plugin does not store any personal data.

▾ Log store manager

logstore	The log stores
plugintype_link	

▾ Learning plans

The Learning plans plugin does not store any personal data.

▾ Import competency framework

The Import competency framework plugin does not store any personal data.

▾ Competencies migration tool

The Competencies migration tool plugin does not store any personal data.

▾ Inbound message configuration

messageinbound_message list	A list of message identifiers which failed validation and requires further authorisation

database_table

messageid	The message ID
userid	The ID of user who need to approve the message
address	The address where the email was sent
timecreated	The time when the record was made

core_userkey subsystem_link	User's keys to validate the email received

▾ Moodle app tools

tool_mobile_autologin_req uest_last user_preference	The date of the last auto-login key request. Between each request 6 minutes are required.

core_userkey subsystem_link	User's keys used to create auto-login key for the current user.

▾ Event monitor

tool_monitor_rules database_table	This stores monitor rules.
description	Description of the rule
name	Name of the rule
userid	The ID of user who created the rule.
plugin	Frankenstlye name of the plugin
eventname	Fully qualified name of the event
template	Message template
frequency	Frequency of notifications
timewindow	Time window in seconds
timemodified	When this rule was last modified
timecreated	When this rule was created

tool_monitor_subscription s database_table	Stores user subscriptions to various rules
userid	The ID of the subscriber.
timecreated	When this subscription was created
lastnotificationsent	When a notification was last sent for this subscription.
inactivedate	Period of time, in days, after which an inactive subscription will be removed completely

tool_monitor_history database_table	Stores the history of the message notifications sent
userid	The ID of the user to whom this notification was sent
timesent	When the message was sent

core_message subsystem_link	Notifications are sent to the message system.

▾ Multilang upgrade

The Multilang upgrade plugin does not store any personal data.

OAuth 2 services

▾ OAuth 2 services

The OAuth 2 services plugin does not store any personal data.

▾ PHPUnit tests

The PHPUnit tests plugin does not store any personal data.

▾ Policies

tool_policy_acceptances database_table	Information about policy agreements made by users.
policyversionid	The version of the policy for which consent was given.
userid	The user for whom this policy agreement relates to.
status	The status of the agreement.
lang	The language used to display the policy when consent was given.
usermodified	The user who gave consent for the policy, if made on behalf of another user.
timecreated	The time when the user agreed to the policy.
timemodified	The time when the user updated their agreement.
note	Any comments added by a user when giving consent on behalf of another user.

tool_policy_versions database_table	Policy version information.
name	The name of the policy.
type	Policy type.
audience	The type of users required to give their consent.
archived	The policy status (active or inactive).
usermodified	The user who modified the policy.
timecreated	The time that this version of the policy was created.
timemodified	The time that this version of the policy was updated.
policyid	The policy that this version is associated with.
revision	The revision name of this version of the policy.
summary	The summary of this version of the policy.
summaryformat	The format of the summary field.
content	The content of this version of the policy.
contentformat	The format of the content field.

core_files subsystem_link	The policy tool stores files included in the summary and full policy.

▾ Profiling runs

The Profiling runs plugin does not store any personal data.

▾ Recycle bin

The Recycle bin plugin does not store any personal data.

▾ DB search and replace

The DB search and replace plugin does not store any personal data.

▾ Spam cleaner

The Spam cleaner plugin does not store any personal data.

▾ Scheduled task configuration

The Scheduled task configuration plugin does not store any personal data.

▾ Template library

The Template library plugin does not store any personal data.

▾ Unsupported role assignments

The Unsupported role assignments plugin does not store any personal data.

▾ Course upload

The Course upload plugin does not store any personal data.

▾ User upload

The User upload plugin does not store any personal data.

▾ User tours

tool_usertours_tour_reset_time_ user_preference	The time that a user last manually requested a user tour.
tool_usertours_tour_completion_time_ user_preference	The time that a user last completed a user tour.

▾ XMLDB editor

The XMLDB editor plugin does not store any personal data.

▾ Cache store

▾ APC user cache (APCu)

The APC user cache (APCu) plugin stores data briefly as part of its caching functionality but this data is regularly cleared and is not sent externally in any way.

▾ File cache

The File cache cachestore plugin stores data briefly as part of its caching functionality but this data is regularly cleared.

▾ Memcached

memcached external_location	The Memcached cachestore plugin stores data briefly as part of its caching functionality. This data is stored on an Memcache server where data is regularly removed.
data	The various data stored in the cache

▾ MongoDB

▼ MongoDB

mongodb

external_location | The MongoDB cachestore plugin stores data briefly as part of its caching functionality. This data is stored on an MongoDB server where data is regularly removed.

data | The various data stored in the cache

▼ Redis

redis
external_location | The Redis cachestore plugin stores data briefly as part of its caching functionality. This data is stored on an Redis server where data is regularly removed.

data | The various data stored in the cache

▼ Session cache

core_user
subsystem_link | The Session cachestore plugin stores data briefly as part of its caching functionality. This data is stored in the short-lived user session.

▼ Static request cache

The Static request cachestore plugin stores some data, but this is only present for the lifetime of a single HTTP request.

▼ Cache lock handler

▼ File locking

The File locking plugin does not store any personal data.

▼ Document converter

▼ Google Drive

googledrive
external_location | This information is sent to Google Drive API in order the file to be converted to an alternative format. The file is temporarily kept on Google Drive and gets deleted after the conversion is done.

params | The query parameters passed to Google Drive API.
filecontent | The content of the file.
filemimetype | The MIME type of the file.

▼ Microsoft OneDrive (Additional)

onedrive
external_location | This information is sent to Microsoft OneDrive API in order the file to be converted to an alternative format. The file is temporarily kept on Microsoft OneDrive Drive and gets deleted after the conversion is done.

params | The query parameters passed to Microsoft OneDrive API.
filecontent | The content of the file.

▼ Unoconv

The Unoconv document converter plugin does not store any personal data.

▼ Theme

▾ Boost

drawer-open-nav   The user's preference for hiding or showing the drawer menu navigation.
user_preference

▾ Classic

The Classic theme does not store any personal data.

▾ Nottingham (Additional)

The theme makes use of the Boost user preferences. The Boost theme will handle exporting it.

▾ Nottingham Faculty of Arts (Additional)

This theme does not store any personal data.

▾ Nottingham Faculty of Engineering (Additional)

This theme does not store any personal data.

▾ Nottingham The Environment (Additional)

This theme does not store any personal data.

▾ Nottingham Foundation (Additional)

This theme does not store any personal data.

▾ Nottingham Leadership and Management Academy (Additional)

The LMA theme does not store any personal data.

▾ Nottingham Faculty of Medicine and Health Sciences (Additional)

This theme does not store any personal data.

▾ Nottingham Professional Services (Additional)

This theme does not store any personal data.

▾ Nottingham Faculty of Science (Additional)

This theme does not store any personal data.

▾ Nottingham Faculty of Social Sciences (Additional)

This theme does not store any personal data.

▾ Local plugin

▾ Archive tool (Additional)

The course archive tool does not store or transmit any personal information.

▾ Bulk role assign ^{Additional}

The plugin examines user data to check if it matches rules for category enrolment. While a user matches a rule they will be enrolled at a category level in Moodle. The plugin itself does not store any personal data, nor does it transmit any personal data to an external system.

▾ Fullscreen toggle button ^{Additional}

fullscreenmode user_preference	Stores if the user has full screen mode active.

▾ MediaSpace package libraries ^{Additional}

lti_client external_location	The LTI Consumer provides user information and context to the LTI Tool Provider.
userid	The ID of the user accessing the LTI Consumer
username	The username of the user accessing the LTI Consumer
useridnumber	The ID number of the user accessing the LTI Consumer
firstname	The firstname of the user accessing the LTI Consumer
lastname	The lastname of the user accessing the LTI Consumer
fullname	The fullname of the user accessing the LTI Consumer
email	The email address of the user accessing the LTI Consumer
role	The role in the course for the user accessing the LTI Consumer
courseid	The ID of the course the user is accessing the LTI Consumer from
courseidnumber	The ID number of the course the user is accessing the LTI Consumer from
courseshortname	The shortname of the course the user is accessing the LTI Consumer from
coursefullname	The fullname of the course the user is accessing the LTI Consumer from
custompublishdata	The courses the user is enrolled in and the LTI roles the user has in the course
editor	The editor of the user accessing the LTI Consumer
module	The name of the module the user is accessing the LTI Consumer from
source	The source URL of the media entry of the user accessing the LTI Consumer

▾ Media Gallery ^{Additional}

Kaltura media gallery plugin does not store any personal data.

▾ Large file report ^{Additional}

This plugin does not store or use personal data.

▾ Moodle Mobile additional features ^{Additional}

Moodle Mobile additional features plugin does not store any personal data

▾ My Media ^{Additional}

My Media plugin does not store any personal data.

▾ New Relic ^{Additional}

newrelic external_location	Data is sent to NewRelic so that error traces contain Moodle specific information that helps yo diagnose the cause of problems.

userid	The Moodle id of a user.
contextid	The id of the context of the page that a user is viewing.
pageurl	The url of the page that the user is viewing.

▾ GSA Spider (Additional)

search_engine external_location	Allows an authenticated search engine to crawl and index content within a configured category. The search engine may index personal information if it appears on the pages at the time of crawling.
moodle_page	The contents of a course or activity page as displayed for the search engine user account

▾ University of Nottingham Functions Library Plugin (Additional)

local_uonlib_check_login external_location	A web service that verifies a username and password or time limited key.
userid	The Moodle user id is returned to the caller
username	The username of the user is returned if they are authenticated with a time limited key.

local_uonlib_user_details external_location	A web service that returns the details of a single user.
userid	The Moodle id of the user
username	The username of the user
idnumber	The idnumber of the user. This could be a student number or staff payroll number
firstname	The first name of the user
lastname	The last name of the user
degree	The student record system code for the degree the user is studying
year	The year of study of the user
email	The e-mail address of the user
status	Which type of university user they are, for example: staff or student

local_uonlib_user_list external_location	A web service that returns a list of users based of their University of Nottingham programme and year of study.
userid	The Moodle id of the user
username	The username of the user
idnumber	The idnumber of the user. This could be a student number or staff payroll number
firstname	The first name of the user
lastname	The last name of the user
degree	The student record system code for the degree the user is studying
year	The year of study of the user
email	The e-mail address of the user
status	Which type of university user they are, for example: staff or student

local_uonlib_course_user_list external_location	A web service that returns a list of users on a Moodle course.
userid	The Moodle id of the user
username	The username of the user
idnumber	The idnumber of the user. This could be a student number or staff payroll number
firstname	The first name of the user
lastname	The last name of the user

degree	The student record system code for the degree the user is studying
year	The year of study of the user
email	The e-mail address of the user
status	Which type of university user they are, for example: staff or student

local_uonlib_assign_submissions external_location	A web service that returns a list of submissions to a Moodle assignment
url	The url to download the assignmnet submission
username	The user name of he user who submitted the assignment

▾ Assignment / Submission plugin

▾ Submission comments

| core_comment <br> subsystem_link | Comments between the student and teacher about a submission. |

▾ File submissions

| core_files <br> subsystem_link | The files loaded for this assignment submission |

▾ Online text submissions

assignsubmission_onlinetext database_table	Stores the text submission for each attempt.
assignment	Assignment ID
submission	The submission ID that links to submissions for the user.
onlinetext	The actual text submitted for this attempt of the assignment.

| core_files <br> subsystem_link | Files that are embedded in the text submission. |

▾ Assignment / Feedback plugin

▾ Feedback comments

assignfeedback_comments database_table	This stores comments made by the graders as feedback for the student on their submission.
assignment	Assignment ID
grade	The grade ID associated with the comment.
commenttext	The comment text.

| core_files <br> subsystem_link | Feedback files from the teacher for the student. |

▾ Annotate PDF

| assignfeedback_editpdf_quick <br> database_table | Stores teacher specified quicklist comments |

userid	The user ID
rawtext	Stores raw text for the quick data.
colour	Colour of the comment or annotation

core_files subsystem_link	Stores an annotated PDF with feedback for the user.

core_fileconverter subsystem_link	Files are converted to PDFs to allow for annotations.

▾ **File feedback**

core_files subsystem_link	Feedback files from the teacher for the student.

▾ **Offline grading worksheet**

This plugin has no database to store user information. It only uses APIs in mod_assign to help with displaying the grading interface.

▾ **Assignment 2.2 (Disabled) / assignment**

   ▾ **Offline**

The Offline assignment plugin does not store any personal data.

   ▾ **Online**

The Online assignment plugin does not store any personal data.

   ▾ **Upload**

The Upload assignment plugin does not store any personal data.

   ▾ **Upload single**

The Upload single assignment plugin does not store any personal data.

▾ **Book / Book tool**

   ▾ **Book IMS CP export**

The Book IMS CP export plugin does not store any personal data.

   ▾ **Book chapter import**

The Book chapter import plugin does not store any personal data.

   ▾ **Book printing**

The Book printing plugin does not store any personal data.

▾ **Database / Database field type**

▾ Checkbox

The Checkbox field component does not store any personal data itself, it uses tables defined in mod_data.

▾ Date

The Date field component does not store any personal data, it uses tables defined in mod_data.

▾ File

The File field component does not store any personal data, it uses tables defined in mod_data.

▾ Latlong

The Latitude/longitude field component does not store any personal data, it uses tables defined in mod_data.

▾ Menu

The Menu field component does not store any personal data, it uses tables defined in mod_data.

▾ Multimenu

The Multiple-selection menu field component does not store any personal data, it uses tables defined in mod_data.

▾ Number

The Number field component does not store any personal data, it uses tables defined in mod_data.

▾ Picture

The Picture field component does not store any personal data, it uses tables defined in mod_data.

▾ Radio button

The Radio button field component does not store any personal data, it uses tables defined in mod_data.

▾ Text input

The Text field component does not store any personal data, it uses tables defined in mod_data.

▾ Text area

The Textarea field component does not store any personal data, it uses tables defined in mod_data.

▾ URL

The URL field component does not store any personal data, it uses tables defined in mod_data.

▾ Database / Preset

▾ Image gallery

The Image gallery plugin does not store any personal data.

▾ Forum / forumreport

▾ **Forum summary report**

The Forum summary report plugin does not store any personal data.

▾ External tool / LTI source

▾ External tool / LTI service

▾ Basic Outcomes Service

External LTI provider. external_location	This information is sent to an external LTI provider.
userid	The ID of the user using the LTI consumer.
grade	The tool's grades of the user using the LTI consumer.

▾ LTI Assignment and Grade Services

External LTI provider. external_location	This information is sent to an external LTI provider.
userid	The ID of the user using the LTI consumer.
grade	The grade the user received in Moodle for this LTI activity.
maxgrade	The max grade that can be achieved for this LTI activity.
feedback	The feedback the user received for this LTI activity.
timemodified	The last time the grade was updated

▾ Names and Role Provisioning LTI Service

External LTI provider. external_location	This information is sent to an external LTI provider.
userid	The ID of the user using the LTI consumer.
useridnumber	The ID number of the user using the LTI consumer
fullname	The fullname of the user using the LTI consumer.
firstname	The firstname of the user using the LTI consumer.
lastname	The lastname of the user using the LTI consumer.
email	The email of the user using the LTI consumer.

▾ Tool Consumer Profile LTI Service

The Tool Consumer Profile LTI Service plugin does not store any personal data.

▾ Tool Proxy Service

The Tool Proxy Service plugin does not store any personal data.

▾ Tool Settings Service

The Tool Settings Service plugin does not store any personal data.

▾ Quiz / Report

▾ Manual grading

The Quiz Manual grading plugin does not store any personal data. It provides an interface for users to store data without storing any data itself.

▾ Grades

quiz_overview_slotmarks
user_preference

Whether to show marks for each question slot.

▾ Responses

**quiz_report_responses_qt
ext**
user_preference

Whether to show the question text columns.

**quiz_report_responses_re
sp**
user_preference

Whether to show the students' response columns.

**quiz_report_responses_rig
ht**
user_preference

Whether to show the correct response columns.

**quiz_report_responses_wh
ich_tries**
user_preference

Which tries to show responses from.

▾ Statistics

Although the Quiz Statistics plugin has database tables, the data is aggregate data and does not describe a unique indidividual.

▾ Quiz / Access rule

▾ Delay between attempts quiz access rule

The Delay between attempts quiz access rule plugin does not store any personal data.

▾ IP address quiz access rule

The IP address quiz access rule plugin does not store any personal data.

▾ Number of attempts quiz access rule

The Number of attempts quiz access rule plugin does not store any personal data.

▾ Offline attempts access rule

The Offline attempts quiz access rule plugin does not store any personal data.

▾ Open and close date access rule

The Open and close date quiz access rule plugin does not store any personal data.

▾ Password quiz access rule

The Password quiz access rule plugin does not store any personal data.

▾ Safe Exam Browser quiz access rule

The Safe Exam Browser quiz access rule plugin does not store any personal data.

▾ JavaScript security quiz access rule

The JavaScript security quiz access rule plugin does not store any personal data.

▾ Time limit quiz access rule

The Time limit quiz access rule plugin does not store any personal data.

▾ SCORM package / Report

▾ Basic report

scorm_report_pagesize user_preference	Number of users to display in the SCORM reports
scorm_report_detailed user_preference	Whether to track details in the SCORM basic report

▾ Graph report

The Graph report only shows data stored in other locations.

▾ Interactions report

scorm_report_pagesize user_preference	Number of users to display in the SCORM reports
scorm_report_interactions **_qtext** user_preference	Whether to display the summary of questions in the SCORM interactions report
scorm_report_interactions **_resp** user_preference	Whether to display the summary of responses in the SCORM interactions report
scorm_report_interactions **_right** user_preference	Whether to display the summary of right anwers in the SCORM interactions report
scorm_report_interactions **_result** user_preference	Whether to display the summary of results in the SCORM interactions report

▾ Objectives report

scorm_report_pagesize user_preference	Number of users to display in the SCORM reports
scorm_report_objectives_ **score** user_preference	Whether to display the objective score in the SCORM report

▾ Workshop / Grading strategy

▾ Accumulative grading

The Accumulative grading plugin only stores the details of the assessment form. Actual personal data of how the form has been filled are stored by the Workshop module itself and are attached to exported assessments.

▾ Comments

The Comments grading plugin only stores the details of the assessment form. Actual personal data of how the form has been filled are stored by the Workshop module itself and are attached to exported assessments.

▾ Number of errors

The Number of errors plugin only stores the details of the assessment form. Actual personal data of how the form has been filled are stored by the Workshop module itself and are attached to exported assessments.

▾ Rubric

The Rubric plugin only stores the details of the assessment form. Actual personal data of how the form has been filled are stored by the Workshop module itself and are attached to exported assessments.

▾ Workshop / Submissions allocation method

▾ Manual allocation

workshopallocation_manual_perpage user_preference	Number of allocated assessments the user prefers to see on one page.

▾ Random allocation

The Random allocation plugin does not store any personal data. Actual personal data about who is going to assess whom are stored by the Workshop module itself and they form basis for exporting the assessments details.

▾ Scheduled allocation

The Scheduled allocation plugin does not store any personal data. Actual personal data about who is going to assess whom are stored by the Workshop module itself and they form basis for exporting the assessments details.

▾ Workshop / Grading evaluation method

▾ Comparison with the best assessment

The Comparison with the best assessment plugin does not store any personal data. Actual personal data user's grades are stored by the Workshop module itself and are attached to the exported submissions and assessments data.

▾ Atto HTML editor / Atto plugin

▾ Accessibility checker

The atto_accessibilitychecker plugin does not store any personal data.

▾ Screenreader helper

The atto_accessibilityhelper plugin does not store any personal data.

▾ Text align

The atto_align plugin does not store any personal data.

▾ Background colour

The atto_backcolor plugin does not store any personal data.

▾ Bold

The atto_bold plugin does not store any personal data.

▾ Insert character

The atto_charmap plugin does not store any personal data.

▾ Clear formatting

The atto_clear plugin does not store any personal data.

▾ Show/hide advanced buttons

The atto_collapse plugin does not store any personal data.

▾ Echo360 Plugin (Atto) (Additional)

echo360.com external_location	The Echo360 Plugin (Atto) does not store any personal data, but does transmit user and context data to integrate with Echo360.
userid	The ID of the user accessing the Echo360 Plugin (Atto)
fullname	The fullname of the user accessing the Echo360 Plugin (Atto)
firstname	The firstname of the user accessing the Echo360 Plugin (Atto)
lastname	The lastname of the user accessing the Echo360 Plugin (Atto)
email	The email address of the user accessing the Echo360 Plugin (Atto)
roles	The roles in the course for the user accessing the Echo360 Plugin (Atto)
courseid	The ID of the course the user is accessing the Echo360 Plugin (Atto)
courseshortname	The shortname of the course the user is accessing the Echo360 Plugin (Atto)
coursefullname	The fullname of the course the user is accessing the Echo360 Plugin (Atto)

▾ Emoji picker

The atto_emojipicker plugin does not store any personal data.

▾ Emoticon

The atto_emoticon plugin does not store any personal data.

▾ Equation editor

The atto_equation plugin does not store any personal data.

▾ Font colour

The atto_fontcolor plugin does not store any personal data.

▾ **Toggle full screen** (Additional)

The Atto Toggle full screen plugin does not store any personal data.

▾ **Insert H5P**

The atto_h5p plugin does not store any personal data.

▾ **HTML**

The atto_html plugin does not store any personal data.

▾ **Insert or edit image**

The atto_image plugin does not store any personal data.

▾ **Indent**

The atto_indent plugin does not store any personal data.

▾ **Italic**

The atto_italic plugin does not store any personal data.

▾ **Embed Kaltura Media** (Additional)

The atto_kalturamedia plugin does not store any personal data.

▾ **Link**

The atto_link plugin does not store any personal data.

▾ **Manage files**

The atto_managefiles plugin does not store any personal data.

▾ **Insert or edit an audio/video file**

The atto_media plugin does not store any personal data.

▾ **Prevent auto-link**

The atto_noautolink plugin does not store any personal data.

▾ **Ordered list**

The atto_orderedlist plugin does not store any personal data.

▾ **RecordRTC**

The RecordRTC plugin does not store any personal data.

The RecordRTC plugin does not store any personal data.

▾ RTL/LTR

The atto_rtl plugin does not store any personal data.

▾ Strike through

The atto_strike plugin does not store any personal data.

▾ Subscript

The atto_subscript plugin does not store any personal data.

▾ Superscript

The atto_superscript plugin does not store any personal data.

▾ Table

The atto_table plugin does not store any personal data.

▾ Paragraph styles

The atto_title plugin does not store any personal data.

▾ Underline

The atto_underline plugin does not store any personal data.

▾ Undo/Redo

The atto_undo plugin does not store any personal data.

▾ Unordered list

The atto_unorderedlist plugin does not store any personal data.

▾ TinyMCE HTML editor / Plugin

▾ CTRL+right click helper

The Ctrl+right TinyMCE plugin does not store any personal data.

▾ Kaltura media (Additional)

The TinyMCE Kaltura Media plugin does not store any personal data.

▾ Manage embedded files

The Manage embedded files TinyMCE plugin does not store any personal data.

▾ Insert emoticon

The Moodle Emoticon TinyMCE plugin does not store any personal data.

▾ Insert image

The TinyMCE Moodle image plugin does not store any personal data.

▾ Insert media

The TinyMCE Moodle Media plugin does not store any personal data.

▾ Prevent automatic linking

The TinyMCE Automatic link prevention plugin does not store any personal data.

▾ Toolbar Toggle

The TinyMCE Toolbar toggle plugin does not store any personal data.

▾ Legacy spell checker

The TinyMCE Legacy spell checker plugin does not store any personal data.

▾ Wrap

The TinyMCE Wrap plugin does not store any personal data.

▾ Log store manager / Log store

▾ Standard log archive (Additional)

log external_location	A collection of past events archived from the standard log store.
eventname	The event name
userid	The ID of the user who triggered this event
relateduserid	The ID of a user related to this event
anonymous	Whether the event was flagged as anonymous
other	Additional information about the event
timecreated	The time when the event occurred
origin	The origin of the event
ip	The IP address used at the time of the event
realuserid	The ID of the real user behind the event, when masquerading a user.

▾ Legacy log archive (Additional)

log external_location	A collection of past events archived from the legacy log
time	The time when the action took place
userid	The ID of the user who performed the action
ip	The IP address used at the time of the event
action	A description of the action
url	The URL related to the event
info	Additional information

▾ External database log

log external_location	A collection of past events
eventname	The event name
userid	The ID of the user who triggered this event
relateduserid	The ID of a user related to this event
anonymous	Whether the event was flagged as anonymous
other	Additional information about the event
timecreated	The time when the event occurred
origin	The origin of the event
ip	The IP address used at the time of the event
realuserid	The ID of the real user behind the event, when masquerading a user.

▾ Legacy log

log external_location	A collection of past events
time	The time when the action took place
userid	The ID of the user who performed the action
ip	The IP address used at the time of the event
action	A description of the action
url	The URL related to the event
info	Additional information

▾ Standard log

logstore_standard_log database_table	A collection of past events
eventname	The event name
userid	The ID of the user who triggered this event
relateduserid	The ID of a user related to this event
anonymous	Whether the event was flagged as anonymous
other	Additional information about the event
timecreated	The time when the event occurred
origin	The origin of the event
ip	The IP address used at the time of the event
realuserid	The ID of the real user behind the event, when masquerading a user.

▾ core

▾ core_access

This subsystem does not store any data.

▾ core_admin

The Administration plugin does not store any personal data.

▾ core_analytics

analytics_indicator_calc database_table	Indicator calculations
starttime	Calculation start time
endtime	Calculation end time
contextid	The context
sampleorigin	The origin table of the sample
sampleid	The sample ID
indicator	The indicator calculator class
value	The calculated value
timecreated	When the prediction was made

analytics_predictions database_table	Predictions
modelid	The model ID
contextid	The context
sampleid	The sample ID
rangeindex	The index of the analysis interval
prediction	The prediction
predictionscore	The prediction score
calculations	Indicator calculations
timecreated	When the prediction was made
timestart	Calculations time start
timeend	Calculations time end

analytics_prediction_actio **ns** database_table	Prediction actions
predictionid	The prediction ID
userid	The user that made the action
actionname	The action name
timecreated	When the prediction action was performed

▾ core_antivirus

The Antivirus system does not store any personal data.

▾ core_auth

auth_forcepasswordchang **e** user_preference	Indicates whether the user should change their password upon logging in
create_password user_preference	Indicates that a password should be generated for the user
login_failed_count user_preference	The number of times the user failed to log in
login_failed_count_since_ **success** user_preference	The number of times the user failed to login since their last successful login
login_failed_last user_preference	The date when the last failed login attempt was recorded

login_lockout	Whether the user's account is locked due to failed login attempts, and the date when the
user_preference	account was locked

login_lockout_ignored	Indicates that a user's account should never be subject to lockouts
user_preference	

login_lockout_secret	When locked, the secret the user must use for unlocking their account
user_preference	

▾ core_availability

The Access restriction subsystem does not store any personal data.

▾ core_backup

Backup	The purpose of this archive is to store information related to a course, which may be
external_location	restored in the future.

detailsofarchive	This archive can contain various user data related to a course, such as grades, user
	enrolments and activity data.

backup_controllers	The list of backup operations
database_table	
operation	The operation that was performed, eg. restore.
type	The type of the item being operated on, eg. activity.
itemid	The ID of the course
timecreated	The time when the action was created
timemodified	The time when the action was modified

▾ core_badges

badge	A collection of badges
database_table	
usercreated	The ID of the user who created the badge
usermodified	The ID of the user who modified the badge
timecreated	The time when the badge was created
timemodified	The time when the badge was last modified

badge_issued	A record of badges awarded
database_table	
userid	The ID of the user who was awarded a badge
dateissued	The date of the award
dateexpire	The date when the badge expires

badge_criteria_met	A collection of criteria which have been met
database_table	
userid	The ID of the user who has met the criteria
datemet	The date when the criteria was met

badge_manual_award	A record of manual awards
database_table	
recipientid	The ID of the user who is manually awarded a badge
issuerid	The ID of the user awarding the badge

issuerrole	The role of the user awarding the badge
datemet	The date when the user was awarded the badge

badge_backpack database_table	A record of user's backpacks
userid	The ID of the user whose backpack it is
email	The email associated with the backpack
externalbackpackid	The ID of the backpack
backpackuid	The backpack unique identifier

backpacks external_location	Information shared when users submit their badges to an external backpack
name	The name of the badge
description	The description of the badge
image	The image of the badge
url	The Moodle URL where the issued badge information can be seen
issuer	Some information about the issuer

▾ core_block

blockIDhidden user_preference	Records when the user collapsed/hid a block

docked_block_instance_ID user_preference	Records when the user docked a block

▾ core_blog

post database_table	The information related to blog entries
userid	The ID of the user who added the blog entry
subject	The blog entry title
summary	The blog entry text
uniquehash	A unique identifier for an external entry, typically a URL
publishstate	Whether the entry is visible to others or not
created	The date when the blog entry was created
lastmodified	The date when the blog entry was last modified

core_comment subsystem_link	Comments associated with blog entries

core_files subsystem_link	Files attached to blog entries

core_tag subsystem_link	Tags associated with blog entries

blog_external database_table	A link to an external RSS feed
userid	The ID of the user who added the external blog entry
name	The name of the feed
description	The description of the feed

url	The URL of the feed
filtertags	The list of tags to filter the entries with
timemodified	The time when the association was last modified
timefetched	The time when the feed was last fetched

▾ core_bulkusers

This subsystem does not store any data.

▾ core_cache

| **cachestore**
plugintype_link | The Cache subsystem stores data temporarily on behalf of other parts of Moodle. This data is not easily identifiable, and is very short lived. It serves as a cache of data stored elsewhere in Moodle, and should therefore already be handled by those Moodle components. |

▾ core_calendar

event database_table	The Calendar component can store user calendar event details within the core subsystem.
name	The name of the calendar event.
description	The description of the calendar event.
eventtype	The event type of the calendar event.
timestart	The start time of the calendar event.
timeduration	The duration of the calendar event.

event_subscriptions database_table	The Calendar component can stores user calendar subscriptions details within the core subsystem.
name	The name of the calendar subscription.
url	The url of the calendar subscription.
eventtype	The event type of the calendar subscription.

| **calendar_savedflt**
user_preference | The configured calendar event type display user preference. |

▾ core_cohort

cohort_members database_table	Information about the user's cohort.
cohortid	The ID of the cohort
userid	The ID of the user which is associated to the cohort
timeadded	The timestamp indicating when the user was added to the cohort

▾ core_comment

comments database_table	Stores comments of users.
content	Stores the text of the comment.
timecreated	Time a comment was created.
userid	The user who made the comment.

▾ core_competency

competency
database_table

A record of the competencies

timecreated	The time when the record was created
timemodified	The time when the record was edited
usermodified	The user who created or modified the record

competency_coursecomps etting
database_table

A record of the competency settings in a course

timecreated	The time when the record was created
timemodified	The time when the record was edited
usermodified	The user who created or modified the record

competency_framework
database_table

A record of the competency frameworks

timecreated	The time when the record was created
timemodified	The time when the record was edited
usermodified	The user who created or modified the record

competency_coursecomp
database_table

A record of the competencies linked to a course

timecreated	The time when the record was created
timemodified	The time when the record was edited
usermodified	The user who created or modified the record

competency_template
database_table

A record of the learning plan templates

timecreated	The time when the record was created
timemodified	The time when the record was edited
usermodified	The user who created or modified the record

competency_templatecom p
database_table

A record of the competencies in a learning plan template

timecreated	The time when the record was created
timemodified	The time when the record was edited
usermodified	The user who created or modified the record

competency_templatecoh ort
database_table

A record of the cohorts associated with a learning plan template

timecreated	The time when the record was created
timemodified	The time when the record was edited
usermodified	The user who created or modified the record

competency_relatedcomp
database_table

A record of the relationship between competencies

timecreated	The time when the record was created
timemodified	The time when the record was edited
usermodified	The user who created or modified the record

competency_modulecomp
database_table

A record of the competencies linked to a module

timecreated	The time when the record was created
timemodified	The time when the record was edited
usermodified	The user who created or modified the record

competency_plan
database_table

A record of the learning plans

name	The name of the learning plan
description	The description of the learning plan
userid	The ID of the user whose learning plan it is
status	The status of the learning plan
duedate	The due date of the learning plan
reviewerid	The ID of the reviewer of the learning plan
timecreated	The time when the record was created
timemodified	The time when the record was edited
usermodified	The user who created or modified the record

competency_usercomp
database_table

A record of a user's state of competencies

userid	The ID of the user whose competency it is
status	The status of the competency
reviewerid	The ID of the reviewer
proficiency	Whether proficiency is achieved
grade	The grade given for the competency
timecreated	The time when the record was created
timemodified	The time when the record was edited
usermodified	The user who created or modified the record

competency_usercompcourse
database_table

A record of a user's state of competencies in a course

userid	The ID of the user whose competency it is
proficiency	Whether proficiency is achieved
grade	The grade given for the competency
timecreated	The time when the record was created
timemodified	The time when the record was edited
usermodified	The user who created or modified the record

competency_usercompplan
database_table

A record of the state of competencies in a learning plan

userid	The ID of the user whose competency it is
proficiency	Whether proficiency is achieved
grade	The grade given for the competency
timecreated	The time when the record was created
timemodified	The time when the record was edited
usermodified	The user who created or modified the record

competency_plancomp
database_table

A record of the competencies in a learning plan

timecreated	The time when the record was created
timemodified	The time when the record was edited
usermodified	The user who created or modified the record

competency_evidence
database_table — A record of the evidence affecting a competency's state

action	The type of action taken with the evidence
actionuserid	The user performing the action
descidentifier	An identifier of the translatable evidence description
desccomponent	The component of the translatable evidence description
desca	The optional parameters of the translatable evidence description
url	A URL associated with the evidence
grade	The grade associated with the evidence
note	A non-localised note attached to the evidence
timecreated	The time when the record was created
timemodified	The time when the record was edited
usermodified	The user who created or modified the record

competency_userevidence
database_table — A record of the evidence of prior learning

name	The name of the evidence of prior learning
description	The description of the evidence
url	A URL associated with the evidence
timecreated	The time when the record was created
timemodified	The time when the record was edited
usermodified	The user who created or modified the record

competency_userevidence comp
database_table — A record of the competencies associated with evidence of prior learning

timecreated	The time when the record was created
timemodified	The time when the record was edited
usermodified	The user who created or modified the record

core_comment
subsystem_link — Comments made on learning plans and competencies

▼ core_completion

course_completions
database_table — Stores the course completion data for a user.

userid	The user ID of the person with course and activity completion data
course	A course identifier
timeenrolled	The time that the user was enrolled in the course
timestarted	The time the course was started.
timecompleted	The time that the course was completed.
reaggregate	If the course completion was reaggregated.

course_modules_completion
database_table — Stores activity completion data for a user

userid	The user ID of the person with course and activity completion data
coursemoduleid	The activity ID
completionstate	If the activity has been completed
viewed	If the activity was viewed
overrideby	The user ID of the person who overrode the activity completion
timemodified	The time that the activity completion was modified

course_completion_crit_c ompl database_table	Stores information about users who have completed criteria in a course
userid	The user ID of the person with course and activity completion data
course	A course identifier
gradefinal	Final grade received for course completion
unenroled	If the user has been unenrolled from the course
timecompleted	The time that the course was completed.

This subsystem does not store any data.

▾ core_course

core_completion subsystem_link	The course contains completion information about the user.

core_favourites subsystem_link	The course contains information relating to the course being starred by the user.

coursecat_management_p erpage user_preference	The number of courses to show per page.

▾ core_currencies

This subsystem does not store any data.

▾ core_customfield

customfield_data database_table	Represents custom field data saved to a context
fieldid	Field definition ID
instanceid	Instance ID related to the data
intvalue	Data value, when it is an integer
decvalue	Data value, when it is a decimal
shortcharvalue	Data value when it is a short character
charvalue	Data value when it is a character
value	Data value, when it is a text
valueformat	The format of the value, when it is a text
timecreated	Time when data was created
timemodified	Time when data was last modified
contextid	The ID of the context where the data was saved

customfield plugintype_link	Fields for various components

core_files
subsystem_link

File attached to the custom field data

▾ core_dbtransfer

This subsystem does not store any data.

▾ core_debug

This subsystem does not store any data.

▾ core_editor

htmleditor
user_preference

Text editor preference.

▾ core_edufields

This subsystem does not store any data.

▾ core_enrol

user_enrolments
database_table

The core enrol plugin stores enrolled users.

status	The status of the user enrolment in a course
enrolid	The instance of the enrolment plugin
userid	The ID of the user
timestart	The time when the user enrolment starts
timeend	The time when the user enrolment ends
modifierid	The ID of the user who last modified the user enrolment
timecreated	The time when the user enrolment was created
timemodified	The time when the user enrolment was modified

▾ core_error

This subsystem does not store any data.

▾ core_favourites

favourite
database_table

Stores references to items which have been starred.

userid	The ID of the user who starred the item
component	The component which the starred item belongs to e.g. core_user
itemtype	The starred item type e.g. course
itemid	The identifier for the item being starred
ordering	A number used to order starred items of the same type
timecreated	The time when the item was starred
timemodified	The time when the starred item was last modified

▾ core_filepicker

This subsystem does not store any data.

▾ core_fileconverter

fileconverter
plugintype_link

The fileconverter subsystem acts as a channel, passing requests from plugins to the various fileconverter plugins.

▾ core_files

files
database_table

A record of the files uploaded or shared by users

contenthash	A hash of the file's content
filepath	The path to the file in its file area
filename	The name of the file in its file area
userid	The user who created the file
filesize	The size of the file
mimetype	The MIME type of the file
source	The source of the file
author	The author of the file's content
license	The licence of the file's content
timecreated	The time when the file was created
timemodified	The time when the file was last modified

core_userkey
subsystem_link

A private token is generated and stored. This token can be used to access Moodle files without requiring you to log in.

▾ core_filters

The Filter subsystem does not store any personal data.

▾ core_form

**filemanager_recentviewm
ode**
user_preference

Recently selected view mode of the file picker element.

▾ core_grades

grade_outcomes
database_table

A record of outcomes

timemodified	The time when the record was modified
usermodified	The user who last modified the record

grade_outcomes_history
database_table

A record of previous versions of outcomes

timemodified	The time when grade versioning occurred
loggeduser	The ID of the user who was logged in when the versioning occurred

grade_categories_history
database_table

A record of previous versions of grade categories

timemodified	The time when grade versioning occurred
loggeduser	The ID of the user who was logged in when the versioning occurred

grade_items_history   A record of previous versions of grade items

grade_items_history database_table	A record of previous versions of grade items
timemodified	The time when grade versioning occurred
loggeduser	The ID of the user who was logged in when the versioning occurred

scale database_table	A record of scales
userid	The user who last modified the record
timemodified	The time when the record was last modified

scale_history database_table	A record of previous versions of scales
userid	The user who last modified the record
timemodified	The time when grade versioning occurred
loggeduser	The ID of the user who was logged in when the versioning occurred

grade_grades database_table	A record of grades
userid	The ID of the user whose grade it is
usermodified	The ID of the user who last modified the record
finalgrade	The grade
feedback	The feedback
information	Additional information about the grade
timemodified	The time when the grade was last modified

grade_grades_history database_table	A record of the previous grades
userid	The ID of the user whose grade it is
usermodified	The ID of the user who last modified the record
finalgrade	The grade
feedback	The feedback
information	Additional information about the grade
timemodified	The time when grade versioning occurred
loggeduser	The ID of the user who was logged in when the versioning occurred

grade_import_newitem database_table	Temporary table for storing new grade_item names from grade import
itemname	New grade item name
importcode	A unique batch code for identifying one batch of imports
importer	User importing the data

grade_import_values database_table	Temporary table for importing grades
userid	User whose grade was imported
finalgrade	Raw grade value
feedback	Grade feedback
importcode	A unique batch code for identifying one batch of imports
importer	User importing the data
importonlyfeedback	Flag if only feedback was imported

core_files	Feedback files stored in the gradebook for a user.

▼ core_grading

grading_definitions
database_table

Basic information about an advanced grading form defined in a gradable area.

method	The grading method which is responsible for the definition.
areaid	The area ID where the advanced grading form is defined.
name	The name of the advanced grading definition.
description	The description of the advanced grading method.
status	The status of this advanced grading definition.
copiedfromid	The grading definition ID from where this was copied.
timecopied	The time when the grading definition was copied.
timecreated	The time when the grading definition was created.
usercreated	The ID of the user who created the grading definition.
timemodified	The time when the grading definition was last modified.
usermodified	The ID of the user who last modified the grading definition.
options	Some settings of this grading definition.

grading_instances
database_table

Assessment record for one gradable item assessed by one rater.

raterid	The ID of the user who rated the grading instance.
rawgrade	The grade for the grading instance.
status	The status of this grading instance.
feedback	The feedback given by the user.
feedbackformat	The text format of the feedback given by the user.
timemodified	The time when the grading instance was last modified.

gradingform
plugintype_link

Data for the grading method.

▼ core_group

groups_members
database_table

A record of group membership.

groupid	The ID of the group.
userid	The ID of the user which is associated to the group.
timeadded	The timestamp indicating when the user was added to the group.

core_message
subsystem_link

The group conversations

▼ core_help

This subsystem does not store any data.

▼ core_hub

This subsystem does not store any data.

▼ core_h5p

H5P subsystem does not store any personal data.

▾ core_imscc

This subsystem does not store any data.

▾ core_install

This subsystem does not store any data.

▾ core_iso6392

This subsystem does not store any data.

▾ core_langconfig

This subsystem does not store any data.

▾ core_license

This subsystem does not store any data.

▾ core_mathslib

This subsystem does not store any data.

▾ core_media

Media embedding does not store any personal data.

▾ core_message

messages database_table	Messages
useridfrom	The ID of the user who sent the message
conversationid	The ID of the conversation
subject	The subject of the message
fullmessage	The full message
fullmessageformat	The format of the full message
fullmessagehtml	The HTML format of the full message
smallmessage	A small version of the message
timecreated	The time when the message was created
customdata	Custom data, usually containing internal IDs and a public URL of the sender image (user or group)

message_user_actions database_table	The list of message user actions
userid	The ID of the user who performed this action
messageid	The ID of the message this action belongs to
action	The action that was performed
timecreated	The time when the action was created

message_conversation_members database_table	The list of users in a conversation

database_table		
conversationid	The ID of the conversation	
userid	The ID of the user in a conversation	
timecreated	The time when the member was created	

message_conversation_act ions database_table	The list of conversation user actions	
conversationid	The ID of the conversation this action belongs to	
userid	The ID of the user who performed this action	
timecreated	The time when the action was created	

message_contacts database_table	The list of contacts	
userid	The ID of the user whose contact list we are viewing	
contactid	The ID of the user who is a contact	
timecreated	The time when the contact was created	

message_contact_request s database_table	The list of contact requests	
userid	The ID of the user who sent the contact request	
requesteduserid	The ID of the user who received the contact request	
timecreated	The time when the contact request was created	

message_users_blocked database_table	The list of blocked users	
userid	The ID of the user who performed the blocked action	
blockeduserid	The ID of the user who was blocked	
timecreated	The time when the blocked action was created	

notifications database_table	Notifications	
useridfrom	The ID of the user who sent the notification	
useridto	The ID of the user who received the notification	
subject	The subject of the notification	
fullmessage	The full notification	
fullmessageformat	The notification format	
fullmessagehtml	The HTML of the notification	
smallmessage	The small message of the notification	
component	The component responsible for sending the notification	
eventtype	The event type	
contexturl	The URL related to this notification	
contexturlname	The name of the context	
timeread	The time when the notification was read	
timecreated	The time when the notification was created	
customdata	Custom data, usually containing internal IDs and a public URL of the sender picture (if any)	

core_message_messagepr ovider_settings user_preference	Settings related to messaging	

core_favourites subsystem_link	The conversations starred by the user

▾ core_mimetypes

This subsystem does not store any data.

▾ core_mnet

The MNet plugin does not store any personal data.

▾ core_my

user_home_page_preferen ce user_preference	The user home page preference.

▾ core_notes

post database_table	The Notes component stores user notes within the core subsystem.
content	The content of the note.
courseid	The ID of the course associated with the note
created	The creation date/time for the note.
lastmodified	The last modified date/time for the note.
publishstate	The publish state of the note.
userid	The ID of the user associated with the note

▾ core_pagetype

This subsystem does not store any data.

▾ core_pix

This subsystem does not store any data.

▾ core_plagiarism

plagiarism plugintype_link	The plagiarism subsystem acts as a channel, passing requests from plugins to the various plagiarism plugins.

▾ core_plugin

This subsystem does not store any data.

▾ core_portfolio

portfolio_instance_user database_table	Stores data about portfolio instances and preferences.
instance	Portfolio identifier
userid	User ID
name	Preference name
value	Value for the preference

portfolio_log database_table	Log of portfolio transfers (used to later check for duplicates)
userid	ID of user who exported content
time	Time of transfer (in the case of a queued transfer this is the time the actual transfer ran, not when the user started it)
caller_class	Name of the class used to create the transfer
caller_component	Component name responsible for exporting

portfolio_tempdata database_table	Stores temporary data for portfolio exports.
data	Export data
expirytime	Time this record will expire
userid	User performing export
instance	Portfolio plugin instance being used

portfolio plugintype_link	The portfolio subsystem acts as a channel, passing requests from plugins to the various portfolio plugins.

▾ core_privacy

The privacy subsystem does not store any data of its own and is designed to act as a channel between components and the interface used to describe, export, and remove their data.

▾ core_question

question_attempts database_table	The information about an attempt at a specific question.
flagged	An indication that the user has flagged this question within the attempt.
responsesummary	A summary of the question response.
timemodified	The time that the question attempt was updated.

question_attempt_steps database_table	Each question attempt has a number of steps to indicate the different phases from beginning to completion to marking. This table stores the information for each of these steps.
state	The state of this question attempt step at the end of the step transition.
timecreated	The date and time that this step transition begun.
fraction	The grade that was awarded to this question attempt scaled to a value out of 1.
userid	The user who performed the step transition.

question_attempt_step_da ta database_table	Question attempt steps may have additional data specific to that step. The data is stored in the step_data table.
name	The name of the data item.
value	The value of the data item.

question database_table	The details about a specific question.
name	The name of the question.
questiontext	The question text.
generalfeedback	The general feedback for this question.
timecreated	The date and time when this question was created.
timemodified	The date and time when this question was updated.

createdby	The person who created the question.
modifiedby	The person who last updated the question.

qtype plugintype_link	The Question subsystem interacts with the Question Type plugintype which contains the different types of questions.

qformat plugintype_link	The Question subsystem makes use of the Question Format plugintype for the purpose of importing and exporting questions in different formats.

qbehaviour plugintype_link	The Question subsystem makes use of the Question Behaviour plugintype.

▾ core_rating

rating database_table	The user-entered rating is stored alongside a mapping of the item which was rated.
rating	The numeric rating that the user entered.
userid	The user who made the rating.
timecreated	The time that the rating was first made.
timemodified	The time that the rating was last updated.

▾ core_repository

repository_instances database_table	The Repository plugins component stores user repository instances data within the core subsystem.
name	The custom name of the repository instance.
typeid	The ID type of the repository instance.
userid	The ID of the user owning the repository instance.
username	The optional username configured for the repository instance.
password	The optional password configured for the repository instance.
timecreated	The date/time of creation for the repository instance.
timemodified	The date/time of modification of the repository instance.

repository plugintype_link	The Repository component stores the repository types within the core subsystem.

▾ core_rss

core_userkey subsystem_link	User's keys used to access RSS from a URL

▾ core_role

role_capabilities database_table	The capabilities and override capabilities for a particular role in a particular context
roleid	The ID of the role
capability	The name of the capability.
permission	The permission for a capability: inherit, allow, prevent or prohibit.
timemodified	The date when the capability was created or modified.
modifierid	The ID of the user who created or modified the capability

role_assignments database_table	This table stores the assigned roles in each context.

roleid	The ID of the role
userid	The ID of the user
timemodified	The date when the role assignment was created or modified.
modifierid	The ID of the user who created or modified the role assignment
component	Plugin responsible for role assignment, empty when manually assigned.
itemid	The ID of enrolment/auth instance responsible for this role assignment

| **definerole_showadvanced**
user_preference | Handle the toggle advanced mode button. |

▾ core_search

The search subsystem does not store any personal data.

▾ core_table

This subsystem does not store any data.

▾ core_tag

tag database_table	The details of each unique tag are stored alongside their description and other related information
name	The name of the tag - this is the normalised version of the name.
rawname	The name of the tag - this is the display name.
description	The description of the tag.
flag	Whether a tag has been flagged as inappropriate.
timemodified	The time that the tag was last modified.
userid	The ID of the user who created the tag.

tag_instance database_table	The link between each tag and where it is used.
tagid	The link to the tag.
ordering	The relative order of this tag.
timecreated	The time that this tag was linked to the target.
timemodified	The time that this tag was modified for the target.
tiuserid	Where shared content can be individually tagged by users, the owner of the tag instance is stored.

▾ core_timezones

This subsystem does not store any data.

▾ core_user

user database_table	This table stores the main personal data about the user.
id	The user ID
auth	The authentication plugin used for this user record.
confirmed	If this is an active user or not.
policyagreed	A flag to determine if the user has agreed to the site policy.
deleted	A flag to show if the user has been deleted or not.

suspended	A flag to show if the user has been suspended on this system.
mnethostid	An identifier for the MNet host if used
username	The username for this user.
password	The password for this user to log into the system.
idnumber	An identification number given by the institution
firstname	The first name of the user.
lastname	The surname of the user.
email	An email address for contact.
emailstop	A preference to disable notifications from being sent to the user.
icq	The ICQ number of the user.
skype	The Skype identifier of the user
yahoo	The Yahoo identifier of the user
aim	The AIM identifier of the user
msn	The MSN identifier of the user
phone1	A phone number for the user.
phone2	A phone number for the user.
institution	The institution that this user is a member of.
department	The department that this user can be found in.
address	The address of the user.
city	The city of the user.
country	The country that the user is in.
lang	A user preference for the language shown.
calendartype	A user preference for the type of calendar to use.
theme	A user preference for the theme to display.
timezone	The timezone of the user
firstaccess	The time that this user first accessed the site.
lastaccess	The time that the user last accessed the site.
lastlogin	The last login of this user.
currentlogin	The current login for this user.
lastip	The last IP address for the user.
secret	Secret.. not sure.
picture	The picture details associated with this user.
url	A URL related to this user.
description	General details about this user.
maildigest	A setting for the mail digest for this user.
maildisplay	A preference for the user about displaying their email address to other users.
autosubscribe	A preference as to if the user should be auto-subscribed to forums the user posts in.
trackforums	A preference for forums and tracking them.
timecreated	The time this record was created.
timemodified	The time when the record was modified
trustbitmask	The trust bit mask
imagealt	Alternative text for the user's image.
lastnamephonetic	The phonetic details about the user's surname.
firstnamephonetic	The phonetic details about the user's first name.
middlename	The middle name of the user
alternatename	An alternative name for the user.

user_password_history database_table	A rotating log of hashes of previously used passwords for the user.
userid	The user ID linked to this table.
hash	A hash of a previous password.
timecreated	The time this record was created.

| timecreated | The time this record was created. |

---

user_password_resets
database_table

A table tracking password reset confirmation tokens

userid	The user ID linked to this table.
timerequested	The time that the user first requested this password reset
timererequested	The time the user re-requested the password reset.
token	secret set and emailed to user

---

user_lastaccess
database_table

Information about the last time a user accessed a course.

userid	The user ID linked to this table.
courseid	Course ID
timeaccess	The time for access to the course.

---

user_devices
database_table

This table stores user's mobile devices information in order to send PUSH notifications

userid	The user ID linked to this table.
appid	The app ID, usually something like com.moodle.moodlemobile
name	The device name, occam or iPhone etc..
model	The device name, occam or iPhone etc..
platform	The device platform, Android or iOS etc
version	The device version, 6.1.2, 4.2.2 etc..
pushid	The device PUSH token/key/identifier/registration ID
uuid	The device vendor UUID
timecreated	The time this record was created.
timemodified	The time when the record was modified

---

course_request
database_table

Stores information about requests for courses that users make.

fullname	The fullname for this course.
shortname	A short name for the course.
summary	A description of the course.
category	The category identifier
reason	The reason for requesting this course.
requester	The ID of the user who requested the course

---

sessions
database_table

Database based session storage

state	0 means a normal session
sid	The session ID
userid	The user ID linked to this table.
sessdata	Session content
timecreated	The time this record was created.
timemodified	The time when the record was modified
firstip	The first IP address recorded
lastip	The last IP address for the user.

---

my_pages
database_table

User pages - dashboard and profile. This table does not contain personal data and only used to link dashboard blocks to users

| userid | The user who owns this page or 0 for system defaults |

name	Page name
private	Whether or not the page is private (dashboard) or public (profile)

user_preferences database_table	Preferences associated with the given user
userid	The user ID
name	Preference name
value	Preference value

[core_files](#) subsystem_link	There are multiple different files for the user stored in the files table.

▾ core_userkey

user_private_key database_table	Private keys for the user.
script	The script which is responsible for the user key.
value	The value of the key.
userid	The user associated with the key.
instance	The instance of the script.
iprestriction	The IP address range that this key can be used from.
validuntil	The date that the private key is valid until
timecreated	The date and time that the key was created.

▾ core_webservice

external_tokens database_table	A record of tokens for interacting with Moodle through web services or Mobile applications.
token	The user's token
privatetoken	A more private token occasionally used to validate certain operations, such as SSO
tokentype	The type of token
userid	The ID of the user whose token it is
creatorid	The ID of the user who created the token
iprestriction	IP restricted to use this token
validuntil	The date that the token is valid until
timecreated	The date when the token was created
lastaccess	The date when the token was last used

external_services_users database_table	A list of users who can use a certain external service
userid	The ID of the user
iprestriction	IP restricted to use the service
validuntil	The date that the authorisation is valid until
timecreated	The date when the record was created

▾ core

config_log database_table	The log of configuration changes.
userid	The user who made the change.
timemodified	The time that the change was made.

plugin	The plugin modified.
name	The name of the setting changes.
value	The new value for this setting.
oldvalue	The previous value for this setting.

upgrade_log
database_table

The upgrade log.

type	The type of log entry.
plugin	The plugin which was upgraded.
version	The old version of the plugin.
targetversion	The new version to upgrade to.
info	The main information for this upgrade step.
details	Extra information relating to the upgrade.
backtrace	Any backtrace associated with this upgrade step.
userid	The user who ran the upgrade.
timemodified	The time that the upgrade took place.

task_adhoc
database_table

The status of ad hoc tasks.

component	The component owning the task.
nextruntime	The earliest time to run this task.
userid	The user to run the task as.

task_log
database_table

Log output for a log

component	The component owning the task.
userid	The user that the task belonged to.

events_queue
database_table

The queue of user events waiting to be processed.

eventdata	The data stored in the event.
stackdump	Any stacktrace associated with this event.
userid	The user ID associated with this event.
timecreated	The time that this event was created.

log
database_table

A collection of past events

time	The time when the action took place
userid	The ID of the user who performed the action
ip	The IP address used at the time of the event
action	A description of the action
url	The URL related to the event
info	Additional information
